AMS Antenna Monitoring System

Distance to Fault Detection

The SPINNER Antenna Monitoring System (AMS) protects broadcasting infrastructure by continuous monitoring the entire antenna system and detecting faults at an early stage, such as arcing or water ingress. It informs you about them as well as their location in order to prevent a severe failure.

Radio and television broadcasters worldwide rely on their systems to deliver content to listeners and viewers. Although their infrastructure may be robust, it can still be vulnerable.

Arcing or water ingress can occur for various reasons such as damaged components by bad weather or long-term use, improper installation, RF overloads, or even unexpected events.

The heat generated by the arc can damage the infrastructure or even lead to fire, thus completely disabling the broadcast system. The resulting long off-air times and financial losses incurred by repairs and legal claims are often substantial.

Operators therefore need a reliable early failure detection system to prevent serious damage. The SPINNER Antenna Monitoring System can help with this.

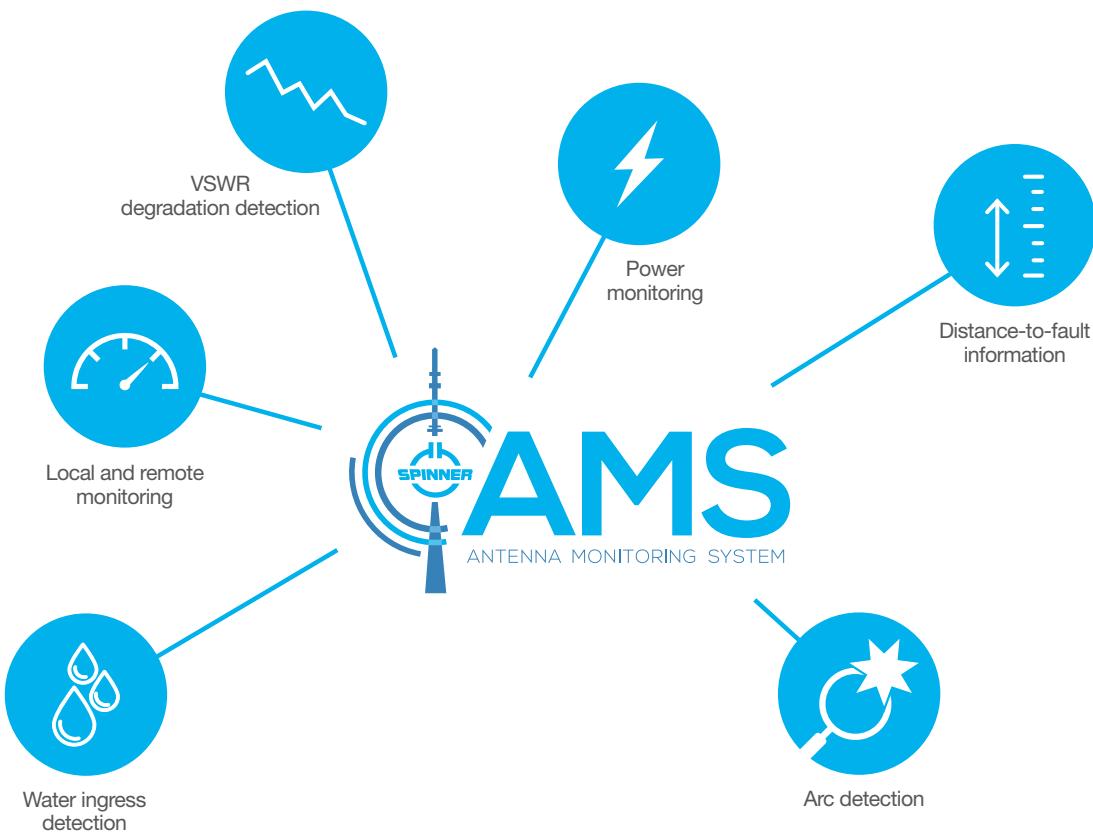

AMS Antenna Monitoring System

The AMS uses two different measurement methods to reliably detect any type of arc, even ones that won't cause VSWR degradation. It also informs you where the problem is so it can be quickly repaired, thus saving you both time and money.

If a fault is detected, you are informed not only locally by LED lamps, but also remotely via SNMP and a user-friendly web interface. Optionally, you can also connect the AMS to the interlock loop of your transmitter, switching it off in the event of an alarm to protect the infrastructure.

Optionally, a power monitoring add-on is also available. It monitors the power level and return losses on up to four RF channels (eight RF probes). Different thresholds for warnings and alarms can be individually set. All of the information is displayed on the web interface and also sent via SNMP. An interlock interface is also available.

It has an ingeniously simple design, with easy and fast installation. All the components are housed indoors. There are no invasive changes to the system and no signals are injected into your antenna.

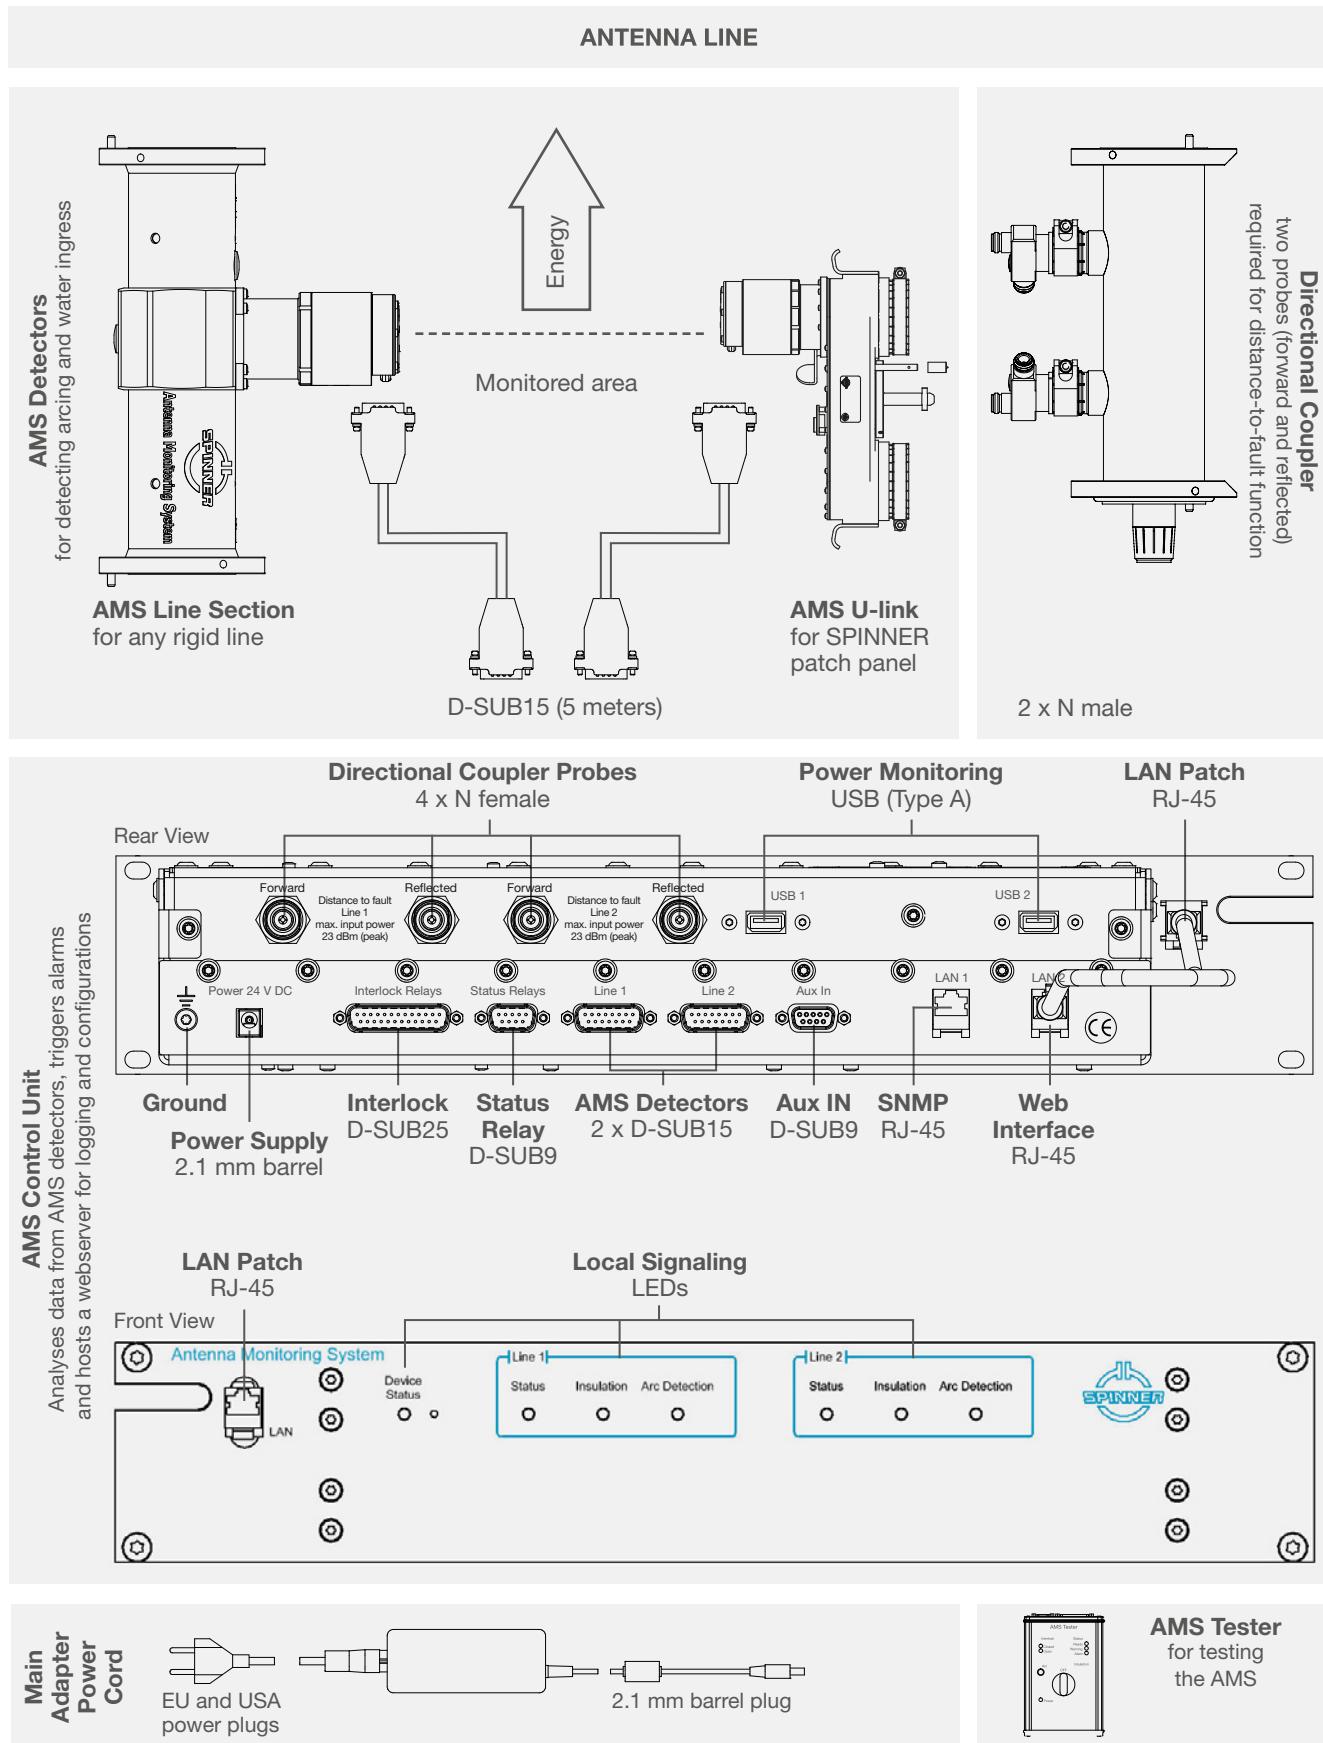

Features & Benefits:

AMS Antenna Monitoring System

Schematic

AMS Antenna Monitoring System

AMS Control Unit

Collects and analyzes data from AMS detectors and directional couplers. When thresholds are exceeded, it triggers warnings and alarms via relay contacts and SNMP. It also hosts a web server for convenient configuration of the AMS system.

General Data

Broadcast standards	FM, DAB, ATSC 1.0, ATSC 3.0, DVB-T/T2, ISDB-Tb
Arc detection, min.	100 µs
Distance-to-fault accuracy	± 2 meters
Emission	No signal injected into antenna line
Size of non-volatile memory, min.	250,000 entries for resistance values, warnings, alarms (10 years of logging with one record per hour)

Mechanical Data

Material and surface	Aluminum alloy
Dimensions (L x W x H) mm	158 x 483 x 88 mm (19", 2RU)
Weight	2.5 kg
IP protection level	IP40 per EN 60529
MTBF	220,000 h (40 °C ambient temperature)

Electrical Data

Main adapter interface	Power cords for USA, EU and UK (available on request)
Main adapter voltage	80 VAC to 264 VAC, 47 to 63 Hz, 113 VDC to 370 VDC
Power consumption, max	40 W

Interfaces

AMS detectors	2 x D-SUB 15
Interlock	D-SUB 25 plug 10 potential-free relay contacts, open active, max. 42.4 V ACpk / 60 V DC, 0.5 A, SELV
Relay status	D-SUB 9 plug 3 potential-free relay contacts, open active, max. 42.4 V ACpk / 60 V DC, 0.5 A, SELV
Auxiliary inputs	D-SUB 9 socket 4 digital inputs, electrically isolated, potential-free 8 V DC to 28 V DC, any polarity, high active
SNMP (LAN1)	RJ-45 (LAN1 or LAN2 can be patched to front panel) SNMPv2c, based on IRT recommendations
Web interface (LAN2)	RJ-45 (LAN1 or LAN2 can be patched to front panel) IE 9 or higher, Firefox
Local signalization	LEDs on front panel and AMS detectors
Directional coupler probes for distance-to-fault function	4 x N female (50 Ohms)
Power monitoring add-on	USB (type A)

AMS Antenna Monitoring System

AMS Line Section

AMS detector for mounting in any rigid line run

General Information

Material and surface	Aluminum alloy, painted
IP protection level	IP 50 per EN 60529
Interface	D-SUB 15 socket

Scope of Delivery

Control unit, line adapter, power cord (EU and USA), AMS detector(s), D-SUB 15 connection cable(s) - 5 m

AMS Antenna Monitoring System

Schematic AMS Power Monitoring Add-On

AMS Antenna Monitoring System

AMS Power Monitoring Add-On

Monitors power level and return losses up to four RF channels (eight RF probes). It triggers user-definable warnings and alarms.

General Data

Part number	BN 555050C0000
Frequency range	50 MHz - 860 MHz
RF channels	Up to 4 channels (8 power probes)
Absolute power measurement accuracy	± 2.0 dB
Relative power measurement accuracy	± 0.5 dB
Power correction (over frequency)	-6 dB / octave
Polling rate via SNMP	6 s

Mechanical Data

Dimensions (L x W x H) mm	158 x 483 x 44 mm (19", 1RU)
Weight	1.6 kg
IP class	IP 40 per EN 60529

Electrical Data

Line adapter voltage	80 V AC to 264 V AC, 47 to 63 Hz, 113 V DC to 370 V DC
Line adapter interface	Power cords for USA, EU and UK (on request)
Power consumption, max.	10 W

Interfaces

Interlock	D-SUB 25 plug 10 potential-free relay contacts, open active, max. 42.4 V ACpk / 60 V DC, 0.5 A, SELV
Relay status	D-SUB 9 plug 3 potential-free relay contacts, open active, max. 42.4 V ACpk / 60 V DC, 0.5 A, SELV
Power probes	up to 8 x N male (50 Ohm)
Data interface to AMS control unit	USB type A, USB type B

AMS Antenna Monitoring System

AMS Power Probes & Cables

For measuring RMS signal power

FM and VHF Probes

Part number	BN 155891
Frequency range	50 MHz - 250 MHz
Power measurement range	-29 dBm to +15 dBm
RF interface connector	1 x N male (50 Ω)
Dimensions (L x W x H) mm	90 x 35.5 x 26
Weight	155 g

UHF Probes

Part number	BN 155892
Frequency range	470 MHz - 860 MHz
Power measurement range	-34 dBm to +10 dBm
RF interface connector	1 x N male (50 Ω)
Dimensions (L x W x H) mm	90 x 35.5 x 26
Weight	155 g

Connecting Cable

Part number	BN A75049	BN A75069	BN A76392
Type	Single cable 1 x Lemo FGG to D-SUB 9 2 metres	Y-cable 2 x Lemo FGG to D-SUB 9 2 metres	Y-cable 2 x Lemo FGG to D-SUB 9 5 metres

Channel Combiners

SPINNER offers different types of combiners such as starpoint, manifold and CIB combiners with constant impedance. Most of the combiners are supplied with integrated mask filters.

Multichannel Combiners

In order for multiple transmitters to broadcast via a shared antenna, it is necessary to connect the transmitter outputs using a combiner so that they can't interfere with one another (isolation), and to route all of the RF power to the antenna (insertion loss).

Bandpass filters or phase-adjusted transmission lines are used to set the frequencies in the combiners.

The bandpass filters can also be used to suppress spurious emissions (with integrated mask filtering for DTV, DAB, T-DMB etc.).

Channel Combiners

Starpoint and Manifold Combiners

Transmitters can be isolated from each other by connecting a bandpass filter to each output. To achieve good matching for the operating channels, the outputs of these filters must be connected via a suitable matching network.

It's important to keep in mind that this system will exhibit a total mismatch outside the operating channels, due to total reflection by the bandpass filters.

Frequency changes or extensions are difficult to accomplish with combiners of these kinds, because the matching networks have to be optimized for the new frequencies.

Constant Impedance Broadband (CIB) Combiners

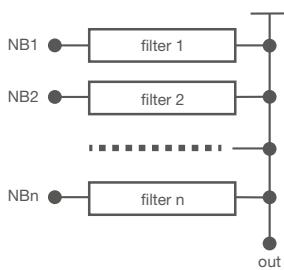

Good isolation, broadband matching and easy modification can be achieved in the CIB combiner with a combination of bandpass filters and 3 dB couplers.

The signal applied to the narrowband input is fed via the narrowband 3 dB coupler into the two bandpass filters, then recombined afterwards in the wideband 3 dB coupler and routed to the antenna output.

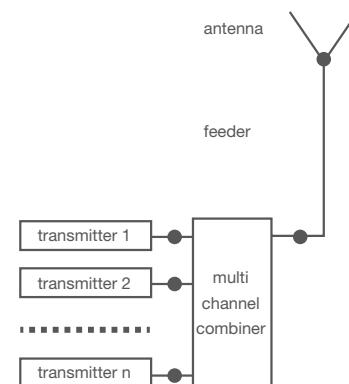

The signals fed into the wideband input arrive at the filter ports via the wideband 3 dB coupler, which totally reflects them back to the wideband coupler. They are then routed to the antenna output.

All of the ports are broadband-matched (yielding constant impedance across a broad band).

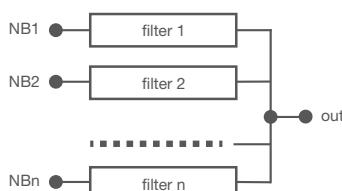

Any transmitter signal can be fed into the wide-band input as long as the frequency spacing across the filters' passband range is large enough to ensure total reflection. Even adjacent channels can be combined if the slopes of the filter curves are steep enough. CIB combiners are the preferred components for designing multichannel combiners because they provide the greatest flexibility for configuring channels and power levels.

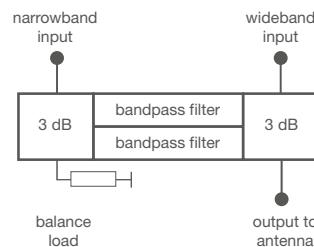

Manifold combiner

Multichannel combiner

Starpoint combiner

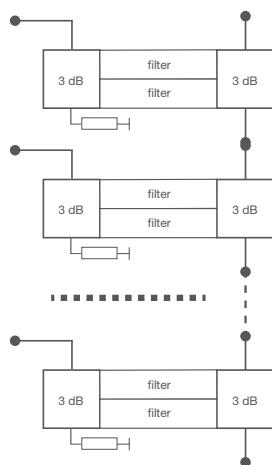

Constant impedance broadband combiner

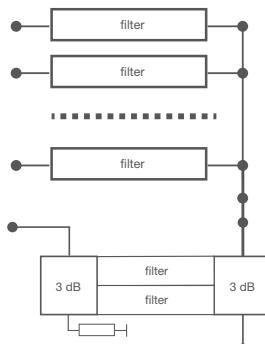

Channel Combiners

Combinations of Multiple Combiners

CIB combiners can be almost arbitrarily cascaded. Additional units can be connected to the wideband input or the output. Starpoint, manifold and stretchline combiners can be connected to the wideband input of CIB combiners to add even more channels.

Chain of CIB combiners

Manifold and CIB combiner

Multi Channel
Combiners

How to Choose the Right Combiner Type

Start by making a list of channels, powers and masking requirements:

Channel	Power	Mask Requirement
23	2 kW	DVB
27	2 kW	DVB
28	10 kW	No
57	1 kW	DVB

If the list contains adjacent channels, they have to be combined using CIB combiners. If mask filters are required, it's preferable to integrate them into the starpoint, manifold or CIB combiner to minimize overall insertion loss while maximizing flexibility for combining channels.

The wide-band inputs of CIB combiners don't provide mask filtering. Appropriate bandpass filters therefore have to be connected to the inputs to meet masking requirements.

After choosing a combiner type (CIB, starpoint, manifold or stretchline), you need to select a model with an adequate power rating.

SPINNER's combiner engineers will be happy to help you select and plan combiner systems. Please send a table indicating the channels and specifications to info@spinner-group.com.

Explanation of the Multi-Channel Combiner Specifications

Calculation of maximum permissible output voltages

Various signals are added up within the combiner. The peak voltages of the individual signal must be calculated and added up. These voltages should not be calculated on the basis of the combined power, since this would result in figures that are too low. It's important for the sum to be less than the rated maximum output voltage. SPINNER recommends a safety margin of 20 %.

Calculation of maximum permissible power at the narrowband input of starpoint, manifold and CIB combiners

The power is limited by the filters. All of the power ratings cited in this catalog are RMS values. If a signal's RMS value differs from the nominal value, correction factors have to be applied (for example, an analog TX with 10/1 kW of nominal power yields only 7 kW of RMS power).

Generally speaking, the RMS power given in the data sheet can be applied. The only exception is for adjacent channels, which may require a reduction as explained below.

Calculation of the maximum permissible power at the wideband input of CIB combiners

All of the power ratings cited in this catalog are RMS values. If a signal's RMS value differs from the nominal value, correction factors have to be applied (for example, an analog TX with 10/1 kW of nominal power yields only 7 kW of RMS power).

Different power levels are usually fed to the combiner inputs: Only one transmitter feeds the narrowband input, while the combined power of two or more transmitters is fed into the wideband input.

To check whether a given CIB combiner model is appropriate, you need to subtract 50% of the narrowband power from the maximum wideband power indicated on the data sheet. If the resulting value is too small, you should select a larger combiner model.

Example:

Power at narrowband input in kW: ≤ 4.0

Power at wideband input in kW: ≤ 7.0

Possible combinations:

Narrowband input in kW:	0.0	1.0	2.0	3.0	4.0
-------------------------	-----	-----	-----	-----	-----

Wideband input in kW:	7.0	6.5	6.0	5.5	5.0
-----------------------	-----	-----	-----	-----	-----

SPINNER recommends maintaining a safety margin of 20 %.

Adjacent channel operation with CIB combiners

CIB combiners are most qualified for combining adjacent channels or blocks. The slope of an adjacent channel fed into the wideband input is not entirely reflected by the bandpass filters. A small portion of the signal enters the filter and is converted into heat. This effect is called "adjacent channel loss". This load on the bandpass filters must be taken into account. To compensate for it, the maximum permissible narrow band power must be reduced by 10 % to 30 % of the adjacent channel power that is fed to the wideband input.

Matching of CIB combiners at the wideband input

To optimize matching for the operating channels, unused channels are capped. It is therefore important to specify all planned operating frequencies when ordering. The VSWR indicated on the data sheet is only guaranteed for one single channel at the wide-band input.

Tuning specifications for filters and combiners

Filters must be tuned to the right channel bandwidth to meet masking requirements. The required information is defined by the tuning specifications (e.g. AS6148), which must be indicated when placing an order. The catalog contains filter data for the most common applications. However, other filter tunings are possible for other masking requirements, applications and bandwidths. Please don't hesitate to contact us for advice.

Solutions for Low- and Medium-Power Combiners

SPINNER offers a complete range of low- and medium-power combiners:

- 1 W to 5 kW
- Band 3, UHF and Band L
- ATV, DAB and DTV

All of the following are available:

- Starpoint combiners made of DAB and DTV mask filters
- Manifold combiners with and without DTV mask filtering
- CIB combiners with and without DAB or DTV mask filtering

Compact combiners can be installed in various ways:

- Inside 19" racks
- On walls
- On floors

Multiple combiner units can be stacked vertically (either in a 19" rack or self-supporting) or attached to walls to minimize their footprint.

The 19" slide-in combiners come in three different versions:

- BN 57____ without a front plate
- BN 57____ C0001 with a front plate and RF ports at the front
- BN 57____ C0002 with a front plate and RF ports at the back

All SPINNER combiner systems comprising multiple units are assembled, tuned and measured in the factory before shipping. SPINNER delivers complete systems that can be easily installed by any skilled technician.

The customer receives complete test results for insertion loss, mask filtering and matching, which can be checked before beginning installation and compared afterward with the on-site results.

BN 574605C0001

with integrated DVB mask filters

Solutions for Compact Combining and Switching Systems for 1 kW to 80 kW

This modular system of combiners and patch panels makes it possible to implement all functions with a minimal footprint.

SPINNER has standardized and miniaturized its combiners and patch panels to the point that combining, mask filtering and many switching functions can be implemented with a footprint of only half a square meter per channel. This design, called CCS, has many advantages:

- It's very simple to plan combiners because 0.5 m² per channel is enough.
- DTV mask filtering (to meet uncritical or critical requirements) can be integrated in the CCS combiner module without increasing its footprint.
- CCS combiner modules are available for up to 80 kW of combined power at one output. For higher power levels in parallel, phase-equalized combiner chains can be created.
- CCS systems can be equipped with monitoring couplers, trimming lines and other accessories.
- Installation is very simple because the CCS modules are supplied as easy-to-handle individual units. On site, the combiner modules only need to be attached to the bottom frame and connected to prefabricated rigid lines. Consequently, even complex combiner systems can be installed ready-to-go in a day or less.
- It's quick, easy and inexpensive to install interconnect lines between the transmitters and antenna because all RF ports are freely accessible at the top. A single vertical length of rigid line is enough for each port.
- Optionally available CCS patch panels make it straightforward to connect reserve operation facilities, bypass individual combiner modules, switch to a common dummy load, or precisely measure combiner performance without disconnecting any rigid lines.
- Off-air times for frequency changes and other modifications can be reduced to minutes when using CCS patch panels.
- The standardized design also makes it easy to replace combiner modules if it should later become necessary to operate adjacent channels or increase power levels.

SPINNER CCS systems deliver enormous benefits for network operators by facilitating planning, installation, operation and future expansion. All of these advantages should be taken into account when comparing with competing products.

Testing in the factory

Multi Channel
Combiners

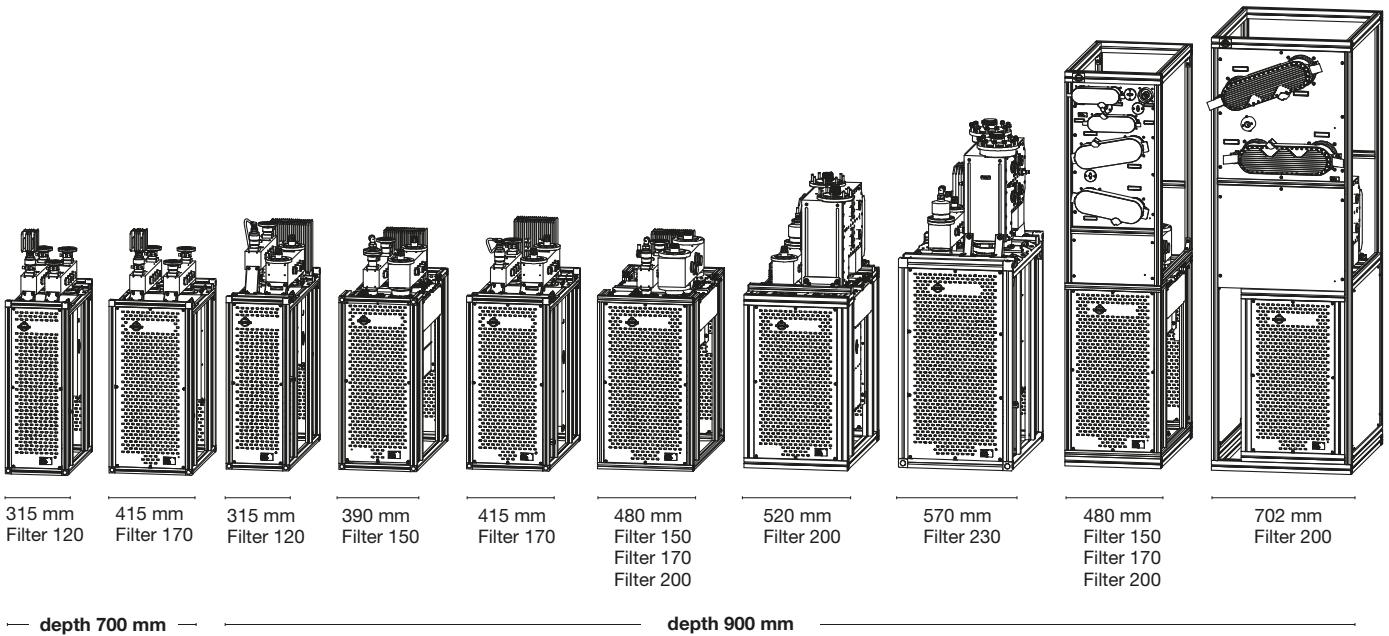

Transportation

Ready for operation on site

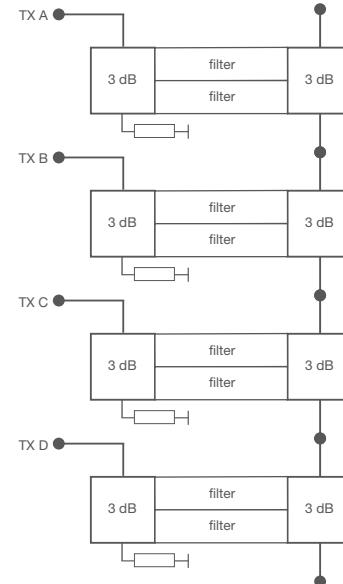

Solutions for Compact Combining and Switching Systems for 1 kW to 80 kW

Solutions for Compact Combining and Switching Systems for 1 kW to 80 kW

CCS System without Patch Panels: Minimum Configuration

For a straightforward system, combiner modules can be connected by simple rigid lines. Systems of this kind are very efficient, but it is necessary to interrupt transmission to make measurements or modifications.

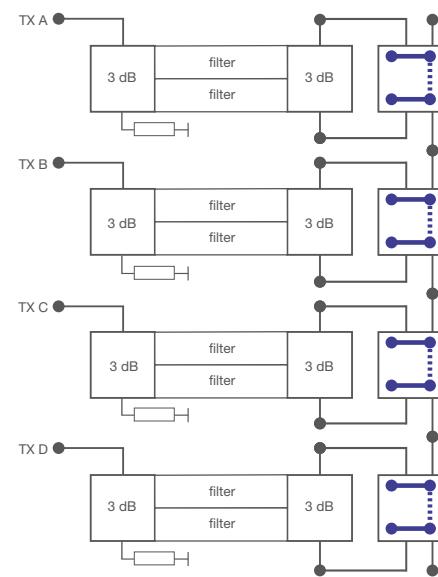

Multi Channel
Combiners

CCS System with Combiner Bypass Patch Panels for Greater Availability

To increase a combiner system's uptime, every combiner module can be equipped with a four-port patch panel. Then any combiner can be bypassed in minutes to enable measurements or frequency changes.

Transmission of the other channels can resume within minutes, and you can even continue transmitting the bypassed channel by feeding it into the free wideband input.

Solutions for Compact Combining and Switching Systems for 1 kW to 80 kW

CCS System with Transmitter Routing and Combiner Bypassing Patch Panels for Maximum Flexibility

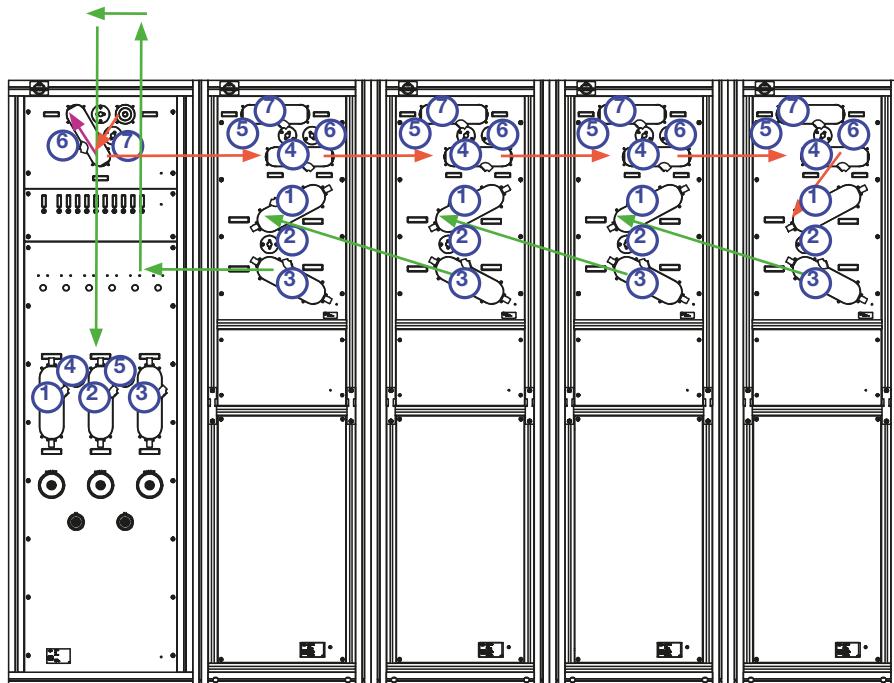

For maximum flexibility, a combiner module can be equipped with four-port patch panels on the input and output sides.

Transmitter routing on the input side:

- For normal operation, the transmitter is directly connected to the combiner input.
- For measurements, the transmitter signal can be switched to a common dummy load.
- For frequency changes, the transmitter can be switched to the wideband input of the combiner system so operation can continue while the combiner unit is being retuned.

Combiner bypassing on the output side:

- During normal operation, the module remains in the combiner chain.
- To make measurements or frequency changes, the combiner module is bypassed and isolated.

— Standard operation:

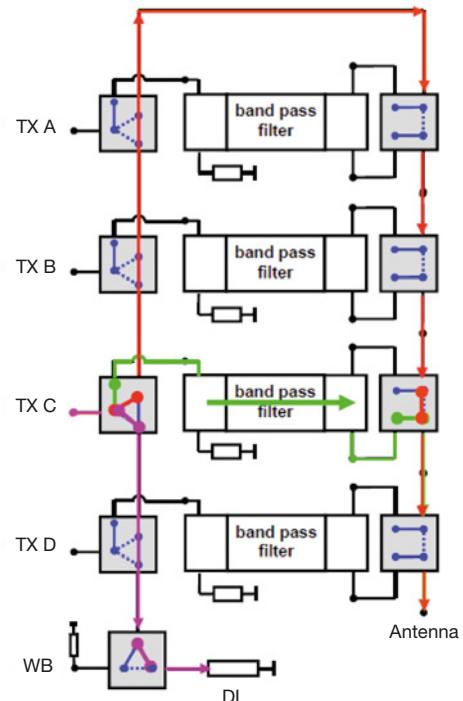

Transmitter via combiner to antenna

— Transmitter measurements:

Transmitter routed to common dummy load

— Combiner measurement or retuning:

Operation continues via the system's wideband input while the combiner module is bypassed.

**BN 575496 Russia**

UHF Combiner for 5 kW DVB with integrated mask filters and 20 kW ATV, combiner bypass and antenna patch panel and 10 kW dummy load

BN 575626 Pfänder, Austria

Band 3 combiner for 5 x 2.5 kW DAB (expandable to 10 x 2.5 kW DAB) with integrated mask filters and antenna patch panel

**BN 575637 South Africa**

UHF combiner for 3 x 3 kW DVB with integrated liquid cooled filters

**BN 575084 Pontop Pike, England**

UHF combiner for 3 x 15 kW DVB with integrated liquid cooled filters, input isolation U-links and pump unit

**BN 574472 Knockmore, Scotland**

Double UHF combiner for 6 x 1.7 kW DVB with integrated 8 MHz DVB mask filters 2 port input isolation patch panel

Design and Offers

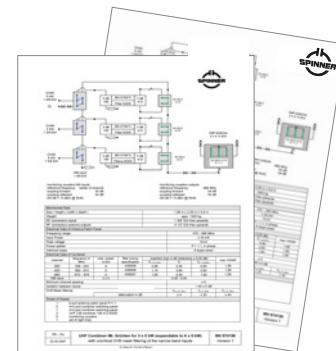

It takes considerable knowledge and experience to design multichannel combiner systems with good technical performance and efficiency. The following aspects have to be taken into account:

- Power of the individual signals
- Voltage of the individual signals
- Frequency spacings (between adjacent channels)
- Requirements for mask filtering
- Patch panels for emergency operation
- Space requirements
- Future frequency changes or extensions
- Performance of combiners, patch panels, etc.

When designing an entire transmission station, the combiner system's specifications (insertion losses and matching) have to be defined in the planning stage.

SPINNER has a team of experienced RF engineers who devote themselves to designing combiner systems. Please send us your requirements and we will prepare an offer along with detailed technical and mechanical specifications like those in the data sheet on the next page.

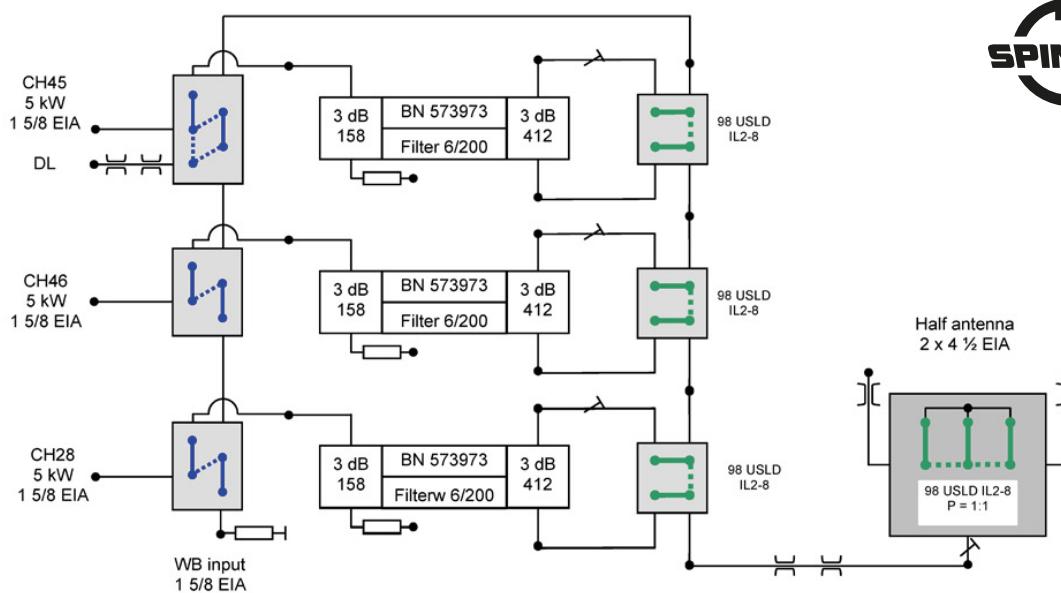

A complete combiner system is shown in the picture below.

 Multi Channel
Combiners

Example:

UHF combiner for 3 x 5 kW DVB
for adjacent channel operation
with integrated 8 MHz DVB mask filters
4 port combiner bypass patch panels
4 port TX rerouting patch panels
6 port half antenna patch panel

Design and Offers

monitoring couplers NB inputs:
 reference frequency center of channel
 coupling forward 54 dB
 coupling reflected 54 dB
 (54 dB ≡ 13 dBm @ 5kW)

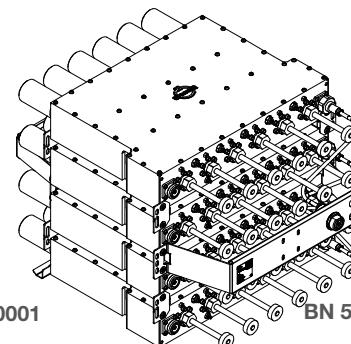

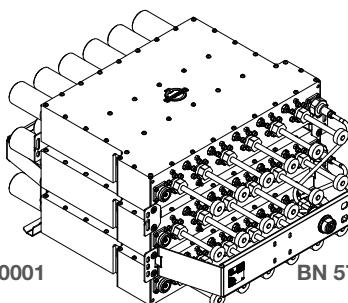

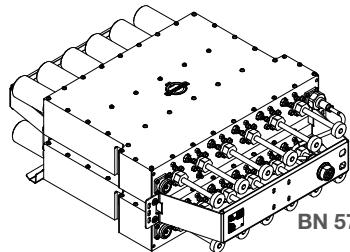

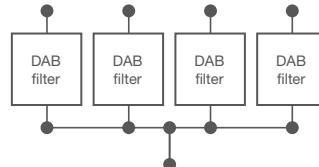

monitoring couplers outputs:
 reference frequency 666 MHz
 coupling forward 54 dB
 coupling reflected 54 dB
 (54 dB ≡ 13 dBm @ 5kW)

Mechanical Data						
Size (height x width x depth)		1,98 m x 2,29 m x 0,9 m				
Weight		appr. 1000 kg				
RF connectors inputs		1 5/8" EIA free upwards				
RF connectors antenna outputs		4 1/2" EIA free upwards				
Electrical Data of Antenna Patch Panel						
Frequency range		470 – 860 MHz				
Input Power		≤ 35 kW				
Peak voltage		19 kV				
Power splitter		P = 1:1, in phase				
Interlock loops		6 loops wired				
Electrical Data of Combiner						
channel	frequency in MHz	max. power in kW	filter tuning specification	insertion loss in dB (tolerance ± 0,05 dB)		
				f ₀ - 3,8 MHz	f ₀	f ₀ + 3,8 MHz

BN 576883

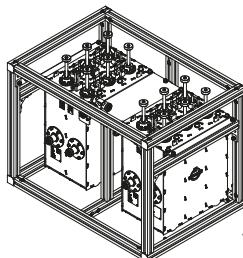

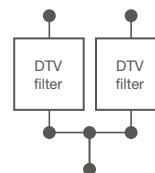

BN 576884

Part Number	BN 576883 Liquid cooling	BN 576884 Liquid cooling
Frequency range	174 - 240 MHz	
Block spacing	≥ 0	
Narrowband input		
Filter type integrated cavities/size	8/245 ≡ BN 617148	
Temperature stability	$\leq 1 \text{ kHz} / \text{K}$	
Harmonics attenuation	$\geq 50 \text{ dB}$ for $f < 460 \text{ MHz}$ $\geq 40 \text{ dB}$ for 460 - 480 MHz	
DAB and T-DMB mask filtering	DAB / T-DMB @ 1.54 MHz ($\hat{U}/U_{\text{rms}} = 13 \text{ dB}$)	
Average input power	$\leq 20 \text{ kW}$	
Tuning instruction	AS8164	
Insertion loss & mask filtering (alternative tuning on request)	$f_0 \leq 0.65 \text{ dB}$ $f_0 \pm 0.77 \leq 1.45 \text{ dB}$ $f_0 \pm 0.97 \leq 18 \text{ dB}$ $f_0 \pm 1.75 \leq 50 \text{ dB}$ $f_0 \pm 2.20 \leq 70 \text{ dB}$ $f_0 \pm 3.00 \leq 70 \text{ dB}$	
Group delay variation	$\Delta\tau \leq 1200 \text{ ns}$	
Wideband input		
Average input power	$3 1/8" \text{ EIA}$ $\leq 30 \text{ kW}$	$4 1/2" \text{ EIA}$ $\leq 60 \text{ kW}$
Attention: The power at the wideband input must be reduced by 50 % of the power fed into the narrowband input.		
Mask filtering	No	
Insertion loss	$\leq 0.1 \text{ dB}$ (non adjacent)	
Output	$3 1/8" \text{ EIA}$	$4 1/2" \text{ EIA}$
Peak output voltage	$\leq 12.7 \text{ kV}$	$\leq 15.5 \text{ kV}$
Isolation between inputs	$\geq 35 \text{ dB}$	
VSWR	≤ 1.1	
Dimensions (L x W x H) mm	1455 x 670 x 1530	
Weight	$\approx 360 \text{ kg}$	
Environmental conditions	For limitations see „Environmental Conditions for Broadcast Products“.	

Band 3 DTV Starpoint Combiners

- Compact design as 19" slide-in unit
- For 6, 7 and 8 MHz channel bandwidth
- Integrated mask filters for DTV
- Temperature compensated
- Filters with cross coupling (notch function)
- Tuneable within the whole band 3

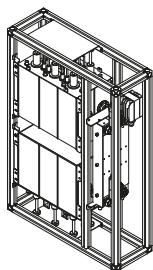

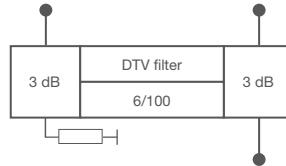

Typical design

Multi Channel
Combiners

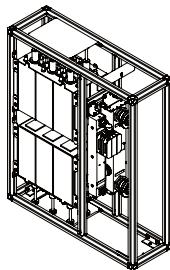

Part Number	BN 574669		
Frequency range	174 - 230 MHz		
Block spacing	≥ 1		
Narrowband input	7-16 female		
Filter type integrated cavities/size	6/100 ≡ BN 617190		
Temperature stability	$\leq 2 \text{ kHz} / \text{K}$		
Harmonics attenuation	$\geq 50 \text{ dB}$ for $f \leq 500 \text{ MHz}$		
Mask filtering	DVB-T @ 8 MHz ($\hat{U}/U_{\text{rms}}=13 \text{ dB}$)	DVB-T @ 7 MHz ($\hat{U}/U_{\text{rms}}=13 \text{ dB}$)	ATSC 1.0 @ 6 MHz ($\hat{U}/U_{\text{rms}}=11 \text{ dB}$)
Average input power	$\leq 1.1 \text{ kW}$	$\leq 1.0 \text{ kW}$	$\leq 900 \text{ W}$
Tuning instruction	AS6164	AS6162	AS6161
Insertion loss & mask filtering (alternative tuning on request)	$f_0 \leq 0.35 \text{ dB}$ $f_0 \pm 3.805 \leq 0.75 \text{ dB}$ $f_0 \pm 4.200 \geq 4.0 \text{ dB}$ $f_0 \pm 6.000 \geq 20 \text{ dB}$ $f_0 \pm 12.00 \geq 55 \text{ dB}$	$f_0 \leq 0.35 \text{ dB}$ $f_0 \pm 3.35 \leq 0.80 \text{ dB}$ $f_0 \pm 3.50 \geq 1.2 \text{ dB}$ $f_0 \pm 3.65 \geq 4.0 \text{ dB}$ $f_0 \pm 5.00 \geq 20 \text{ dB}$ $f_0 \pm 12.0 \geq 55 \text{ dB}$	$f_0 \leq 0.40 \text{ dB}$ $f_0 \pm 2.69 \leq 0.60 \text{ dB}$ $f_0 \pm 3.00 \geq 1.2 \text{ dB}$ $f_0 \pm 3.50 \geq 8.0 \text{ dB}$ $f_0 \pm 4.00 \geq 15 \text{ dB}$ $f_0 \pm 6.00 \geq 30 \text{ dB}$ $f_0 \pm 9.00 \geq 64 \text{ dB}$
Group delay variation	$\Delta\tau \leq 350 \text{ ns}$	$\Delta\tau \leq 350 \text{ ns}$	$\Delta\tau \leq 220 \text{ ns}$
Output	7-16 female		
Isolation between inputs	$\geq 35 \text{ dB}$		
VSWR	≤ 1.2		
Dimensions (L x W x H) mm	689 x 448 x 510		
Weight	$\approx 55 \text{ kg}$		
Environmental conditions	For limitations see „Environmental Conditions for Broadcast Products“.		

Band 3 DTV CIB Combiners

- Compact design
- For 6, 7 and 8 MHz channel bandwidth
- Integrated mask filters for DTV
- Adjacent channel operation
- Temperature compensated
- Filters with cross coupling (notch function)
- Tuneable within the whole band 3

BN 576800

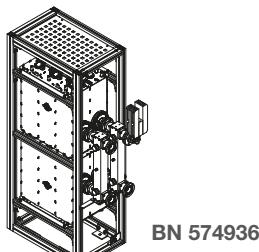

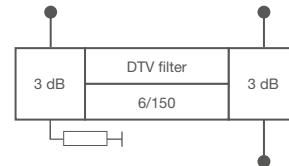

BN 576801

UHF Manifold Combiners

- Compact design as 19" slide-in unit (7RU per channel)
- Delivered in rack
- Installation in customer-owned rack on request
- Integrated mask filters for DTV
- Applicable within the whole UHF range
- For 6, 7 and 8 MHz channel bandwidth
- Temperature compensated

Bandpass Filters

Bandpass and low-pass filters are inserted between a broadcast transmitter's output and the antenna to suppress spurious emissions. For "combined" analog transmitters, filters are needed to suppress harmonics in the vision and sound carrier signals.

For DTV transmitters, filters are used to limit out-of-channel emissions based on various mask specifications (ATSC, DAB, DVB-T and ISDB-T):

- 8 MHz DVB-T and DVB-T2 extended carrier mode
- 8 MHz analog TV
- 7 MHz DVB-T and DVB-T2
- 7 MHz analog TV

- 6 MHz DVB-T, DVB-T2, ISDB-T, ATSC 1.0 and ATSC 3.0
- 6 MHz analog TV
- 1.54 MHz DAB, DAB+ and T-DMB

Bandpass Filters

SPINNER supplies coaxial filters, dual-mode wave guide filters, dielectric filters and low-pass filters for the band 3, UHF and band L frequency ranges.

This catalog contains filter data for the most common applications. However, alternative filter tunings can also be provided for other mask requirements, applications and bandwidths. Please don't hesitate to ask us.

The filter tuning (passband and stopband insertion loss, matching and variation of group delay time) is defined by a tuning specification (e.g. AS6148). You must specify the applicable tuning specification and frequency in every order submitted to ensure that the filter will be correctly tuned in the factory.

All bandpass filters can also be integrated in multi-channel combiners, where they simultaneously isolate the transmitters and can provide mask filtering (please see the section on multi-channel combiners).

The "Environmental Conditions for Broadcast Products" listed in the annex must be complied with during operation, transportation and storage. The maximum rating of the filter depends on environmental conditions like temperature, cooling and elevation above sea level.

Most filters can be operated at up to 2300 meters above sea level at the power specified in the data sheet. For stations located at higher altitudes, the power must be reduced as indicated in the "Environmental Conditions for Broadcast Products".

For some filters with liquid cooling, derating must be performed at altitudes exceeding 500 m asl as shown in the data sheets. The input and output ports of all bandpass filters terminate inside the resonators with an open or a short and therefore block DC and low frequencies.

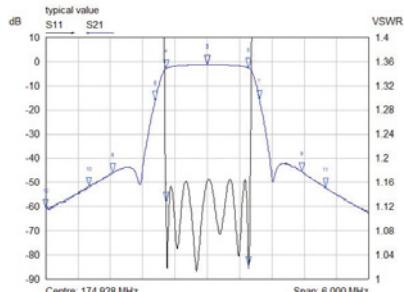

Most bandpass filters are equipped with cross couplings to achieve steeper slopes for mask filtering. Inside multi-channel combiners, cross couplings are used to permit the use of adjacent channels.

300 W Band 3 DAB/T-DMB Bandpass Filters

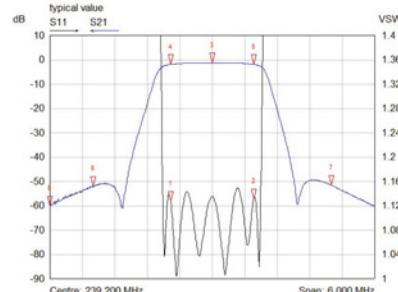

- Mask filters for DAB and T-DMB
- For 1.54 MHz block bandwidth
- With cross coupling (notch function)
- Tuneable within band 3
- Temperature compensated
- DC block
- 19" Slide-in unit

Temperature stability			≤ 1 kHz / K
Dimensions (L x W x H) mm			600 x 450 x 685
Weight			≈85 kg
Temperature of the coolant	–		10 °C – 55 °C
Coolant Flow rate	–		Mix: glycol and water BN 154567 ≥ 3 l/min
Cooling accessories	–		See "Accessories for Fan- and Liquid-Cooled Filters"
Cooling interface	–		Stainless steel tube 12 x 1mm unflanged ending straight (adapters available on request)
Environmental conditions	For limitations see „Environmental Conditions for Broadcast Products“.		

3.1 kW - 8 kW Band 3 DAB/T-DMB Bandpass Filters

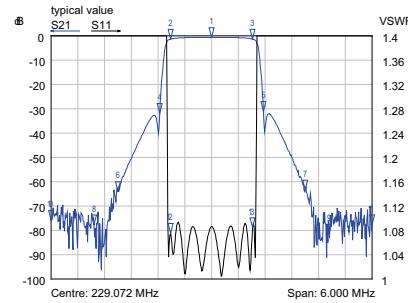

- Mask filters for DAB and T-DMB
- For 1.54 MHz block bandwidth
- With cross coupling (notch function)
- Tuneable within band 3
- Temperature compensated
- DC block
- Installation standing
- Natural or liquid cooling

300 W - 375 W UHF DTV Bandpass Filter

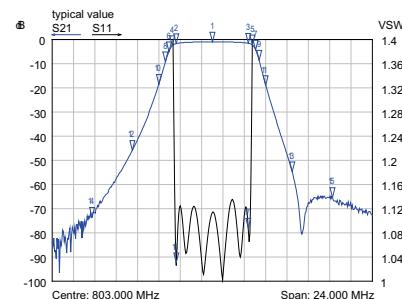

- Mask filter for ATV and DTV
- For 6, 7 and 8 MHz channel bandwidth
- With cross coupling (notch function)
- Tuneable within whole UHF range
- Temperature compensated
- DC block
- Installation horizontally or vertically
- Low profile design

2.25 kW UHF DTV Bandpass Filter

- Mask filters for ATSC
- For 6, 7 and 8 MHz channel bandwidth
- Without cross coupling
- Tuneable within whole UHF range
- Temperature compensated
- DC block
- Installation horizontally or vertically

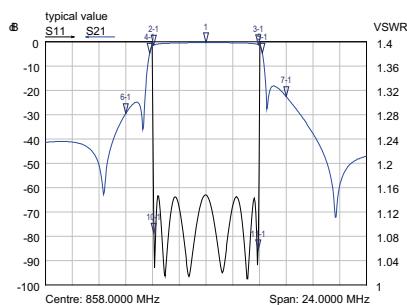

Typical diagram AS6081

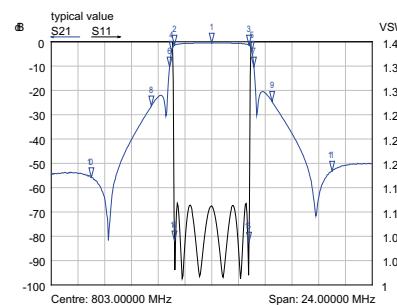

Part Number	BN 616572
Frequency range	470 - 810 MHz
Number/size of cavities	6/150
Harmonics attenuation	≥ 50 dB for $f \leq 860$ MHz
TV standard	ATSC 1.0 @ 6 MHz ($\hat{U}/U_{\text{rms}} = 11$ dB)
Average input power	≤ 2.25 kW
Tuning instruction	AS6081
Insertion loss & mask filtering (alternative tuning on request)	470 MHz 803 MHz f_0 ≤ 0.55 dB ≤ 0.75 dB $f_0 \pm 2.69$ ≤ 0.80 dB ≤ 1.00 dB $f_0 \pm 3.00$ ≤ 2.00 dB ≤ 2.30 dB $f_0 \pm 3.25$ ≥ 3 dB $f_0 \pm 3.50$ ≥ 8 dB $f_0 \pm 4.00$ ≥ 15 dB $f_0 \pm 6.00$ ≥ 40 dB $f_0 \pm 9.00$ ≥ 65 dB
VSWR (passband range)	≤ 1.15
Group delay variation	$\Delta\tau \leq 200$ ns
Temperature stability	≤ 2 kHz / K
Connectors	1 5/8" EIA male
Dimensions (L x W x H) mm	528 x 326 x 411
Weight	≈ 29 kg
Environmental conditions	For limitations see „Environmental Conditions for Broadcast Products“.

2.0 kW - 2.5 kW UHF DTV Bandpass Filter

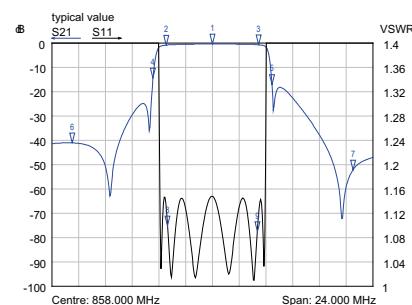

- Mask filter for ATV and DTV
- For 6, 7 and 8 MHz channel bandwidth
- With cross coupling (notch function)
- Tuneable within whole UHF range
- Temperature compensated
- DC block
- Installation horizontally or vertically

6.75 kW - 18 kW UHF DTV Bandpass Filters

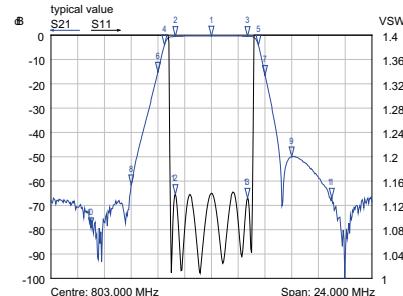

- Mask filters for DTV and ATV
- For 6, 7 and 8 MHz channel bandwidth
- With cross coupling (notch function)
- Tuneable within the whole UHF range
- Temperature compensated
- Installation horizontally or vertically
- DC block
- Natural, fan or liquid cooling

Accessories for Fan- and Liquid-Cooled Filters

SPINNER supplies fan- and liquid-cooled filters and combiners for high transmitter power levels. Fan and liquid cooling are almost equally effective. However, it is simpler to install fan cooling systems because they only require DC wiring, whereas hoses and pumps are needed for liquid cooling systems.

Another difference is that fan cooling transfers the heat into the room, while liquid cooling can be used to carry the heat outdoors. Which cooling system is best in a given case depends on things like whether a liquid cooling system already exists, the capacity of an available air conditioning system, and redundancy requirements.

If forced cooling fails, operation can be continued with natural cooling at reduced power. SPINNER supplies all cooled filters and combiners with a temperature switch that shows whether the filter is too hot (85°C or more) making it necessary to reduce the power. The fans have to be powered with 24V DC from an existing source or via a SPINNER BN 155815 mains adapter, which has capacity for up to 10 filters. SPINNER has many options for implementing liquid-cooled filters, either to supplement existing cooling systems or for use as standalone combiner cooling systems with heat sinks:

- Various interfaces for cooling pipes
- Cooler unit with heat sinks

Pump unit and UHF combiner with liquid cooled filter

Pump unit and indoor cooler

Normally closed contact opening at 71 °C (optional)	BN A72406
Normally closed contact opening at 85 °C (included)	BN B18100

Patch Panels

Patch panels are used to route transmitter signals to single, half or backup antennas or dummy loads or to bypass intermediate systems such as combiners or splitters.

Switching can be performed by motorized switches or manually with U-links. All patch panels have an interlock system that briefly switches off the transmitter during the switchover.

All input and output connectors terminate horizontally with an EIA flange system behind the front panel.

The systems connected to the patch panel can be easily, quickly and precisely measured with test adapters.

SPINNER supplies patch panels for all frequency ranges and sizes (7-16 to 6 1/8"). On request, patch panels can

also be equipped with 3dB couplers for use as power splitters or with measurement couplers.

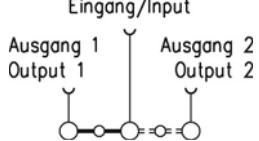

Note:

With digital signal operation, the transmittable power is limited either by the proof voltage, (while taking the crest factor into account) or by the average power.

When operating multiple transmitters, please apply the sum of the individual voltages. This is also true of analog systems. All of the power values are for an ambient temperature of +40 °C.

3 Port Patch Panels

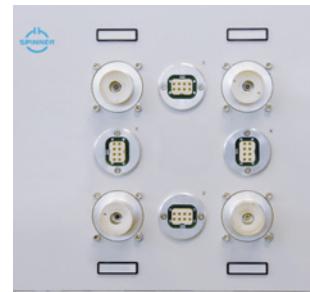

- 19" front panel
- Access to the interlock terminal strip provided at the front
- Slim design panels with minimum height are supplied with loose interlock terminal strip
- U-links with interlock system 1 (IL 1-4)
- Measurement at the front possible

Parallel Switching Units

Parallel switching units are used to double the output power by combining two transmitters that operate at the same frequency and have a phase differential of 90°.

Typically, the failure of one transmitter will cause the output power to drop by 75% because half of the power from the working transmitter then flows into the balancing load of the 3 dB coupler.

The SPINNER parallel switching unit can route transmitter 1 or transmitter 2 straight to the antenna and transmitter 2 or transmitter 1 to the dummy load within seconds.

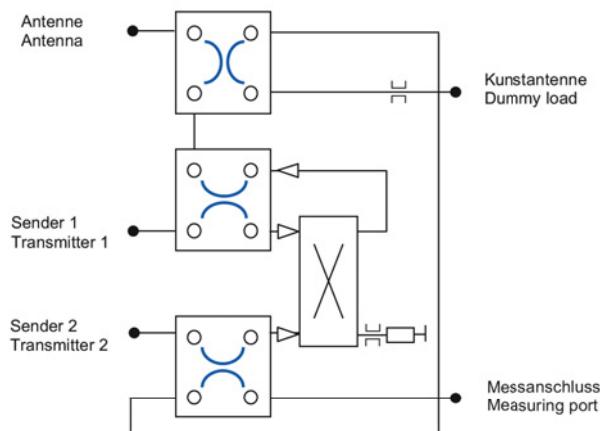

As a result, 50% of the original output power then once again becomes available and the disconnected transmitter is freed for repair or maintenance work. The combined

output of both transmitters can also be routed to the dummy load for measurements.

Switching is done by remotely controlled, motorized two-way switches. In an emergency, the switches can also be operated manually or replaced by U-links. Interlock contacts are available in all cases.

SPINNER supplies parallel switching units for FM, VHF and UHF with various power ratings for analog and digital transmission.

Parallel Switching Units

Switching Possibilities

Standard operation:

- Transmitters TX1 and TX2 to antenna
- Measuring port to dummy load

Emergency operation:

- Working transmitter to antenna
- Defective transmitter to dummy load for measurement or repair

Testing:

- Transmitters TX1 and TX2 to dummy load
- Measuring port to antenna

UHF 30 kW Switchless Combiners

Switchless Combiner for Active-Reserve Transmitters

It is common practice to combine the power of two transmitters via 3 dB couplers to double the output power during normal operation. To prevent the power supply to the antenna from dropping by three-fourths if one transmitter fails, the good transmitter is switched directly through to the antenna while the faulty one is isolated for repair. If this is performed by manual U-links, it is necessary to interrupt transmission for a few minutes.

Even if switching is done by motorized switches, transmission has to be interrupted because the switches don't permit hot switching. The switchless combiner performs the switchover by phase shifting, thus rerouting the signals without any interruption of transmission.

SPINNER has supplied many conventional parallel switching units with U-links or motorized switches and now also offers switchless combiners in "SPINNER quality" as an alternative. Before explaining the details of the switchless combiner, we will compare the advantages of these two competing approaches and explain why SPINNER offers both.

Parallel switching units with U-links or motorized switches:

- No hot switching
- High isolation of transmitters by galvanic separation of RF paths via switches or U-links
- Functionality defined by switch positions independently of the operating frequency

Switchless combiner with trombone line phase shifter:

- Hot switching
- Transmitters are not galvanically isolated; 35 dB of isolation is provided by 3 dB couplers
- Functionality is defined by the position of the trombone and requires readjustment if the frequency changes.

The SPINNER switchless combiner consists of two hybrid couplers connected by a fixed transmission line and a motor-driven trombone line acting as a mechanical phase shifter. A sophisticated control unit makes the switchless combiner as easy to handle as a parallel switching unit, permitting both local and remote control.

The switchless combiner can be tuned in the factory to any channel in the UHF band. To start operating, the switchless combiner only needs to be connected to a power source. Selecting the operating mode is easy: for remote mode, apply a signal to the appropriate input pin; for local mode, press the corresponding button on the control panel.

The control unit then starts the motor to move the phase shifter into a predefined position and reroute the RF signal. The transmitters can continue operating without interruption while the phase shifter is moving; the input ports are always matched, and the power is correctly routed at all times.

The SPINNER switchless combiner also includes safety and emergency functions:

- It retains its position even if control signals or the power supply are interrupted, resuming operation when the signals return.
- It can be operated manually.
- There is a set of potential-free signaling switches that are independent of the control unit and power supply. They indicate whether the switchless combiner has gone into the right operating mode.
- The control unit sends warning and error signals.

The switchless combiner can be readjusted on-site to any channel in the UHF band. This is done by using a network analyzer to locate the new positions of the phase shifter and optimizing the 3 dB couplers.

SPINNER supplies a full range of accessories for installing, retuning and operating the switchless combiner:

- Loads
- Monitoring couplers
- Measurement adapters and calibration kits

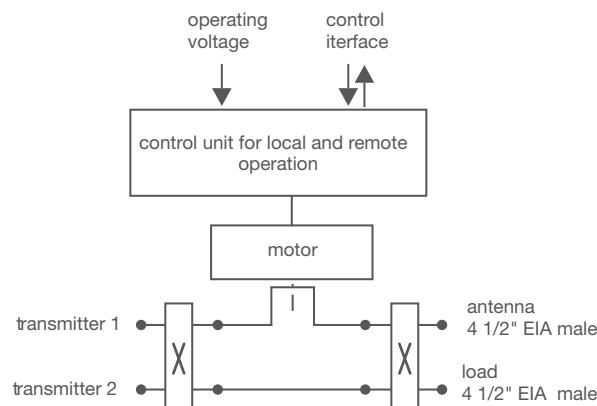

SPINNER supplies the switchless combiner as an alternative for network operators whose priority is to prevent any interruption of transmission.

Note:

The RF signals from the transmitters must be adjusted to ensure that they are in phase at the inputs.

UHF 30 kW Switchless Combiner

- Hot switching
- Simple remote control of all functions
- Feedback of operation mode and interlock signals
- Suitable for analogue and digital TV
- For 6, 7 and 8 MHz channel bandwidth
- Tuneable within the whole UHF range
- CCS compact design

Part Number	BN 536574
Frequency range	470 - 860 MHz
Input power	≤ 15 kW per input
Proof voltage	16 kV
Insertion loss	≤ 0.15 dB
Isolation between inputs	≥ 35 dB
VSWR	≤ 1.1
Operation modes	TX1+TX2 to antenna TX1 to antenna and TX2 to load TX2 to antenna and TX1 to load TX1+TX2 to load
Switching time	10 - 20 s
Operation control	Local via front panel or remote by control signals
RF input	3 1/8" EIA male
RF output	4 1/2" EIA male 339 IEC 50-105
Remote control interface	DC-37-D-sub or terminal block
Operating voltage interface	IEC 60320 C14 male
Operating voltage	85 - 250 V AC; 47 - 63 Hz
Operating current	≤ 3 A
Control signal inputs	8 - 24 V DC
Control signal outputs	Potention-free relay contact or switches; V ≤ 60 V DC; I ≤ 30 A
Dimensions (H x W x D) mm	900 x 390 x 1420
Weight	≈ 97 kg
Environmental conditions *)	Max. altitude AMSL 1.600 ft (limited by power supply)

*) For limitations see „Environmental Conditions for Broadcast Products“.

Two-Way Coaxial Switches

SPINNER supplies a wide variety of switch types for highly demanding applications. Their RF ratings range from a few watts to several hundred kilowatts, and they are available for sizes from N to 8 3/16" and frequencies up to 6 GHz.

SPINNER's RF switches consist of different drive types (lifting magnet, impulse solenoid or motor drive) for switching times from 25 ms up to about one second. The two-way switches, which come in from N up to 8 3/16", are the fastest RF switches available in the marketplace.

Due to their extremely compact dimensions and exceptional dependability, SPINNER switches are preferred for

systems that must be highly reliable. The 2+1 and 4+1 switching units developed by SPINNER are excellently suited for ensuring operation of redundant systems. In 19" rack systems, these compact switching systems have a height of only 1 rack unit yet are able to keep remote stations broadcasting even if a transmitter should fail.

Two-Way Coaxial Switches

Manual Operation

With manually operated switches, the switch position is selected using a knob. The switch locks at its end positions to reliably maintain them even if it is subjected to vibrations or rotates around a rotor axis

Impulse Solenoid Drive

In switches with an impulse solenoid drive, the rotor torque is generated by a rotating permanent magnet surrounded by a stationary coil. The drive system has two stable switching positions and locks in both end positions (i.e. it is latching). A pulse is therefore sufficient as a control signal (no control voltage is required after switching). In the event of a power failure or system restart, the most recent switch position is retained.

There is also a failsafe switch version that is reset to its initial position by a spring if the power fails.

Lifting Magnet Drive

In this version, electromagnetic force moves a lever from its resting position to its final position. When the current stops, the lever is reset to its resting position by an externally applied force such as a spring. Either the drive is not locked in either position (monostable) or else it is held in place by an auxiliary magnet (bistable).

Motor Drive

Motorized switches are turned by a special gear mechanism developed by SPINNER (see “hypocycloid gear mechanism” below). This drive system rotates by 90° and locks in both end positions.

Hypocycloid Gear Mechanism

The drive and switch base (rotor) are connected by a special gear mechanism developed by SPINNER. This mechanism varies the torque and angular velocity across the switch's rotational range. Initially, the torque is very high while the angular velocity of the switch rotor is very low. Then, as the angle increases the angular velocity steadily increases while the torque decreases. After passing the middle of the range, this is reversed and the angular velocity decreases while the torque increases. The drive mechanically locks in both end positions.

Signaling and Interlock Contacts

Potential-free SPDT contacts (signaling contacts) indicate the current switch position.

The interlock contacts are coupled with RF contacts for interrupting RF power before and during switching. They open before the RF contacts separate and close after the RF contacts are in their new position.

The maximum switching limits of these contacts are 42.4 V ACpk / 60 V DC / 0.5 A. For BN 512663 and BN 512665 the limits are 42.4 V ACpk / 50 V DC / 0.1 A.

Protection Class

The protection class is IP40 (EN60529), meaning that the switches are only suitable for indoor use. Switches for outdoor installation are available on request.

Power Ratings

All power ratings apply to room temperature (about 25 °C), normal air pressure (about 1000 hPa), relative humidity of about 50% and an RF-matched state. Specified power ratings are for the highest given frequency and can be transmitted via both switch paths concurrently. If you require operation with pulsed power, please ask for assistance.

Dimensions

All dimensions are in mm.

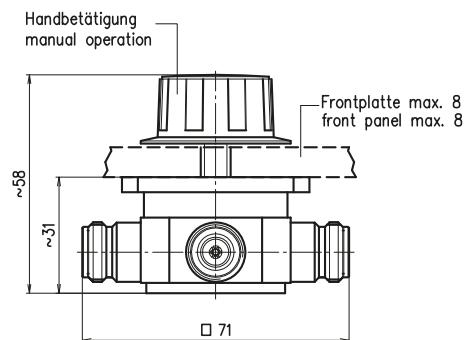

Note:

The maximum average transmittable power of digital signals (e.g. DAB, DVB-T, ATSC, ISDB-T etc.) is rated by applying an RF proof voltage while taking the crest factor into account. When operating multiple transmitters with analog or digital signals, the sum of their voltages must be considered.

Two-Way Switch DPDT with N Connectors, Manual Operation

Rigid Lines and Cable Connectors

SPINNER supplies three types of rigid line systems:
the EIA system, the SMS system and the flaring technique system (BT).

The indicated technical data are also valid for rigid line elbows, which perform significantly better than the values established by the relevant international standards. The proof voltage values refer to sea level.

Rigid Lines and Cable Connectors

EIA System

Coaxial flange connectors, generally known as "EIA flanges", are connected by a coupling element. The flange connector system complies with EIA STD RS-225, 339 IEC, DIN EN 122150 and MIL-F 24044. EIA flange connectors are excellently suited for pressurized systems and outdoor installations.

SMS System

The SPINNER quick clamping system, called "SMS", complies with international rigid line standards including EIA STD RS 225, 339 IEC and DIN EN 122150.

Its parts are connected by coupling elements and secured by clamps. The major advantage of the SMS system is that customers can easily cut the rigid line to length on site without the need for flaring or brazing. Assembly is therefore very simple and requires no special tools.

The SMS system is only suitable for indoor use.

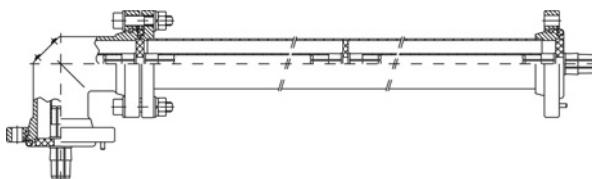

Flaring Technique System (BT)

The outer conductor tube is flared using a SPINNER flaring tool. Its parts are connected by coupling elements. The electrical contact at the outer conductor consists of a metallic ring mounted on the edge of the coupling elements' insulation disk. The resulting very stable connection ensures high RF tightness and a repeatable electrical length.

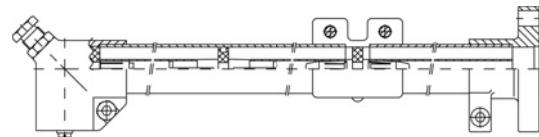

The 52-120 BT flaring technique system is intended for indoor use and designed to handle RF power at levels up to 860 MHz. Please keep in mind that internal supports may be required, depending on the line length, to prevent the inner conductor from sagging.

Note:

For DVB or DAB operation, please note that the transmittable power is limited either by the proof voltage, taking the crest factor into account, or by the average power. When operating multiple transmitters, please base this on the sum of the individual proof voltages. The same thing applies to analog operating mode.

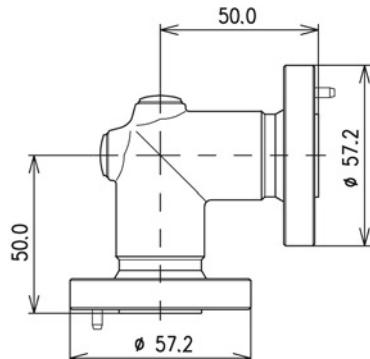

Example of assembly EIA

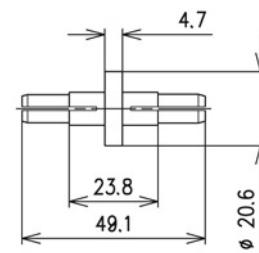

Example of assembly SMS

Rigid Line Components 7/8" EIA

- Very stable rigid line system
- Low insertion loss
- Low VSWR
- PTFE insulation
- Designed for pressure tight systems
- For outdoor application

90° Elbow
BN 837105

Coupling element
BN 911715

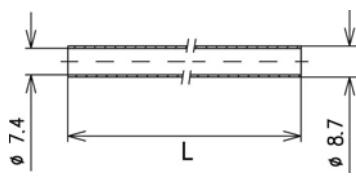

Components

	Length	Weight	Part Number
Inner conductor tube (copper)	L = 2 m L = 4 m	≈ 0.28 kg ≈ 0.57 kg	BN A02402 BN K20265C0004

Cable Connectors and Accessories

SPINNER carries N, 4.3-10, 7-16, 7/8" EIA, 1 5/8" EIA, 3 1/8" EIA, 4 1/2" EIA (339 IEC 50-105) and 6 1/8" EIA connectors for cables made by leading manufacturers. They are famous for their superior RF performance and reliability going back over 60 years:

- CAF® design for ultrafast installation: simply push the stripped cable end into the connector.
- Premium design with flared inner and outer contacts for maximum reliability at high RF power levels
- Connectors for air dielectric cables are tight (the barrier and mating are face-sealed) and have inlets for pressurization.
- There is no risk of water ingress and corrosion, since the gap between the outer conductor and the connector is sealed with Plast 2000 or a custom-shaped gasket.

SPINNER connectors comply with international standards EIA STD RS-225, IEC 60339, MiL-F 24044 and IEC 60169-4/-5.

SPINNER supplies various adapters in test quality.

SPINNER supplies special tools for speeding installation and improving reliability.

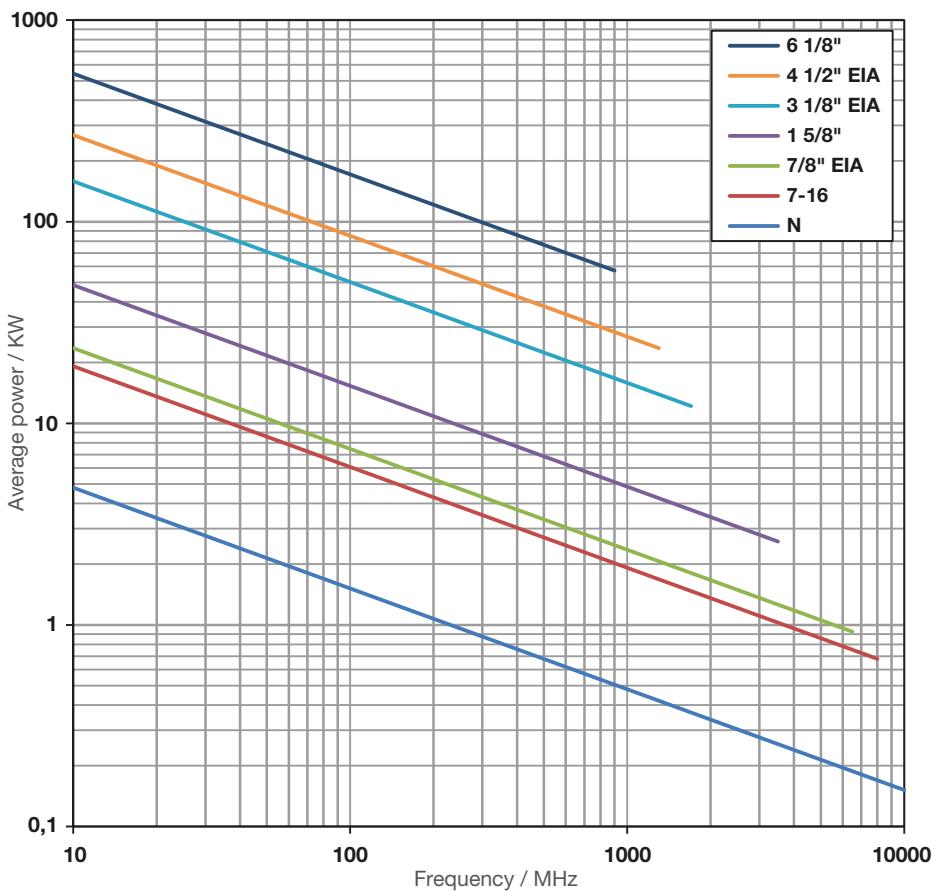

The maximum permissible power depends on the frequency, modulation, reflection and environmental conditions.

The chart shows the maximum CW power for which the EIA connectors are suitable under ideal conditions (no reflection and an ambient temperature of 40°C).

The power rating can be limited by the connector or cable, whichever is lower.

It is advisable to ensure a reasonable safety margin.

Maximum Power Rating

^a339 IEC 50-105

All power ratings apply to an ambient temperature of +40 °C ambient temperature and an inner conductor temperature of +120 °C.

Note:

The power rating may be reduced by the cable attached to the connector

Connectors for Foam Dielectric Cables

CAF® design for ultrafast installation: simply push the stripped cable end into the connector.

MultiFit® connectors are suitable for the most common cable types.

The connectors are sealed by a custom-shaped gasket or injected Plast 2000 to prevent water ingress and corrosion.

SPINNER offers a full range of N, 4.3-10 and 7-16 connectors for the most common cable types in male, female, angle and fixed socket versions.

If you can't find the connector you need below, please use the SPINNER Product Finder (<https://products.spinner-group.com>).

Cable compatibility:

Please see the connector data sheets available at <https://products.spinner-group.com> to check if the connector fits to your cable.

Foam Dielectric Jumper Cables

SPINNER supplies premium jumper cables in sizes 1/4", 3/8", 1/2" and 7/8" with all common connector types like N, 4.3-10, 7-16, 7/8" EIA and 1 5/8" EIA.

They feature top monitored quality to meet your particular need.

Production is fully automated to ensure consistently high quality, competitive prices and short lead times.

Connectors for Air Dielectric Cables

SPINNER connectors are famous for their superior RF performance and reliability.

CAF® design enables ultrafast installation: Simply push the stripped cable end into the connector.

All connectors

- have a sealing ring or profile between the outer conductor and body
- have sealed mating faces and inlets for pressurization
- comply with EIA STD RS-225, IEC 60339, MiL-F 24044 or IEC 60169-4/-5

Connectors are supplied with a NPT 1/8" gas inlet.

Coupling Elements, Sealant and Gas Inlets

EIA coupling elements have PTFE insulator and stainless steel screws.

Coupling elements comply with EIA STD RS-225, IEC 60339, Mil-F 24044 or IEC 60169-4/-5.

O-ring and set of stainless steel screws are included.

Installation Tools

SPINNER supplies trimming tools for fast, correct stripping of foam dielectric cables with corrugated outer connectors. These tools can be used in the factory or in the field to reduce the assembly time by more than 60%.

SPINNER supplies flaring tools for large air dielectric cables and 52-120 rigid line to ensure optimal RF contact. They can be equipped with inserts for different cable types.

Adapters and Measurement Accessories

SPINNER carries a comprehensive range of accessories for facilitating measurement and maintenance work.

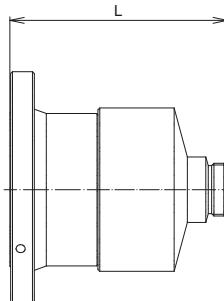

For example, we supply adapters for almost all common international connector systems, directional couplers for measuring forward and reflected power, and direct access units for testing or adjusting antennas without removing the connected lines.

SPINNER is also a world-class supplier of high-precision components for testing and calibration up to 110 GHz.

Terrestrial broadcasting applications typically operate at much lower frequencies, so we have also put together a selection of components that come in handy for performing the most common tests and measurements required for broadcasting equipment: calibration kits, precision adapters and cables, etc.

Adapters (50 Ohms)

For test purposes, SPINNER offers adapters from all EIA flanges to 7-16 female with excellent matching (VSWR ≤ 1.02). Adapters between different kinds of EIA flanges can be used indoors and outdoors to ensure full power.

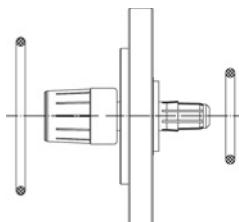

Typical drawing

Adapters (75 Ohms)

For measurements SPINNER offers adapters to N female with excellent matching (VSWR ≤ 1.02)

Adapters between various flanges can be used for full power.

Short adapters with integrated coupling elements save space and cost.

Adapters - Long, Made of Aluminum

Connector 1	7-16 female	7/8" EIA ¹	1 5/8" EIA ¹	3 1/8" EIA ¹	4 1/2" EIA ¹ (339 IEC 50-105)	6 1/8" EIA ¹
Number of trimming screws	5					
Length	195 mm	on request	340 mm	400 mm	450 mm	450 mm
Weight	≈ 1.38 kg	on request	≈ 2.90 kg	≈ 5.10 kg	≈ 10.80 kg	≈ 14.10 kg

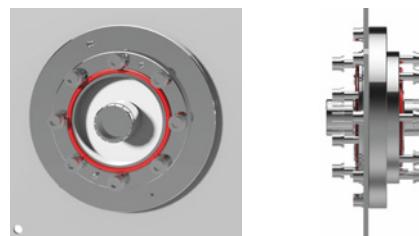

¹ One side with solid built-in coupling element

The proof voltage is valid for trimming screws entirely screwed in.

Trimming lines can be connected in series to increase the tuning range for lower frequencies.

Wall Feed Throughs

- Fixed adapters with coupling element
- For 50 ohms systems
- Protection caps included
- For outdoor application

Part Number	BN 657308C0001	BN 834805C0001	BN 648697C0001	BN 837305
Inner face	1 5/8" EIA male	3 1/8" EIA male	4 1/2" EIA male	52-120 SMS clamp
Outer face	1 5/8" EIA male	3 1/8" EIA male	4 1/2" EIA male	6 1/8" EIA male
Frequency range	0 - 800 MHz			
VSWR	< 1.02			
Wall thickness	5 – 10 mm	5 – 10 mm	5 – 8 mm	5 – 10 mm
Length L	44 mm	51 mm	60 mm	35 mm
Weight	2.0 kg	3.5 kg	5.4 kg	6.2 kg
Environmental conditions	For limitations see „Environmental Conditions for Broadcast Products“.			

Direct Access Units

- Quick and direct access to coaxial line ports
- Accurate measurement of VSWR and electrical lengths via galvanic contacts
- Antenna testing and tuning without removing connected feeders
- For outdoor use
- Compliant with all broadcast standards
- Measurement insert is supplied with storage case including spare parts

Part Number	BN 390906	BN 847712	BN 847710	BN 876610	BN 876706		
Connectors	1 5/8" EIA	3 1/8" EIA	3 1/8" EIA	4 1/2" EIA 339 IEC 50-105	6 1/8" EIA

¹ At sea level, 86 - 106 kPa

² At +40 °C ambient temperature

Direct Access Units

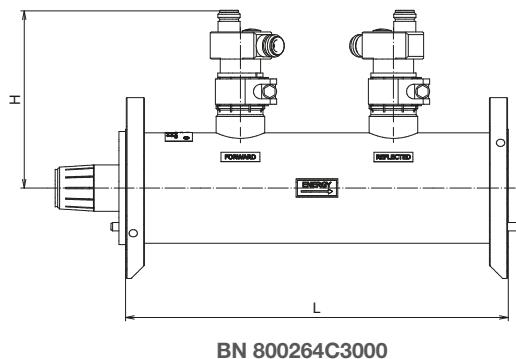

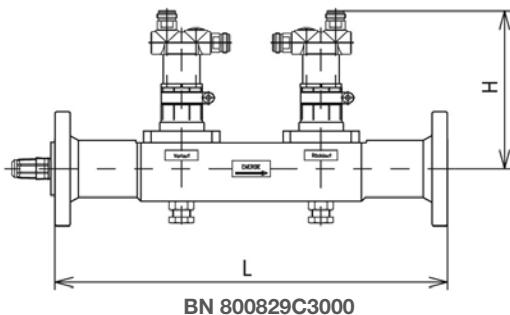

- RF measurements without dismantling rigid lines and cables
- Quick and accurate:
 - Antenna impedance testing and tuning
 - Measurement of feeder VSWR and electrical length
- No need for measurement adapters
- For outdoor application
- No limitation of power and voltage by direct access unit
- Measurement insert is supplied with storage case incl. spare parts

Measurement Accessories

- Calibration kits for more accurate measurements (directivity, return loss, insertion loss)
- Precision adapters with improved surfaces that greatly increase the number of mating cycles
- Precision adapters without O-rings for faster use
- Open ports should be terminated by precision loads to prevent reflections from causing measurement errors.

Product	Description	Part Number	
4-in-1 OSLT calibration kit 50 Ω 7-16 female 0 ≤ f ≤ 6 GHz Incl. test report	For calibrating directly on 7-16 male connectors, includes all required standards for multiport calibration (open, short, load & thru) in one compact unit.	BN 533845	
4-in-1 OSLT calibration kit 50 Ω N female 0 ≤ f ≤ 6 GHz Incl. test report	For calibrating directly on N-male connectors, includes all required standards for multiport calibration (open, short, load & thru) in one compact unit.	BN 533843	
4-in-1 OSLT calibration kit 75 Ω N female 0 ≤ f ≤ 3 GHz Incl. test report	For calibrating directly on N-male connectors, includes all required standards for multiport calibration (open, short, load & thru) in one compact unit.	BN 533857R000	
Precision measurement adapter 7-16 male / N female 0 ≤ f ≤ 7.5 GHz Incl. test report	Hard wearing center conductor, gold plated, for highest durability; for measurement use with improved surfaces for many cycles. Return loss 0 - 3.0 GHz > 40 dB 0 - 7.5 GHz > 36 dB	BN 194403	
Measurement cable SF3/8" 4.5 m 7-16 male / 7-16 male 0 ≤ f ≤ 2.2 GHz	For intermodulation measurements IM3 ≤ -160 dBc with 2 x 20 W Return loss 0 - 0.9 GHz > 32 dB 0 - 2.2 GHz > 28 dB	BN J50004	
Precision load 0.5 W 7-16 male 0 ≤ f ≤ 7.5 GHz	For termination of open 7-16 female ports Return loss 0 - 7.5 GHz > 44 dB	BN 533733R000	
Precision load 0.5 W N male 0 ≤ f ≤ 18 GHz	For termination of open N female ports. Return loss 0 - 6 GHz > 42 dB 6 - 9 GHz > 35 dB 9 - 18 GHz > 32 dB	BN 533910R000	
Attenuator 5 W / 10 dB N male / N female 0 ≤ f ≤ 12 GHz	To protect test equipment from unknown high power signals, recommended for measurements on high power transmitter sites Return loss 0 - 4 GHz > 23 dB 0 - 12 GHz > 15 dB	BN 528626	
Attenuator 5 W / 20 dB N male / N female 0 ≤ f ≤ 12 GHz	To protect test equipment from unknown high power signals, recommended for measurements on high power transmitter sites Return loss 0 - 4 GHz > 23 dB 0 - 12 GHz > 15 dB	BN 528627	

Loads

Loads and attenuators have to meet diverse requirements in terms of performance and connector systems, and the new system makes it simple for you to get exactly what you need.

SPINNER supplies loads for various applications including:

- Precision low-power loads for measurement and network analyzer calibration up to 67GHz
- Low PIM loads for measurement
- Medium-power loads for terminating ports and balancing channel and power combiners
- High-power loads for testing transmitters up to 55kW

Different cooling types are available depending on the absorbed power and application:

- Natural cooling for loads up to 2.5kW
- Fan cooling for loads up to 5 kW
- Liquid cooled loads with integrated or external coolers

1 W Loads

- Low return loss for measurement applications
- Free of lead and BeO
- Convection cooled
- Indoor

BN 392489

BN 392492

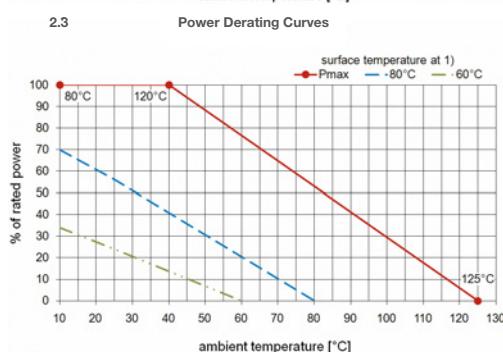

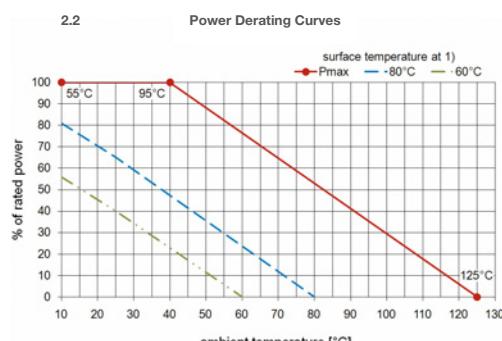

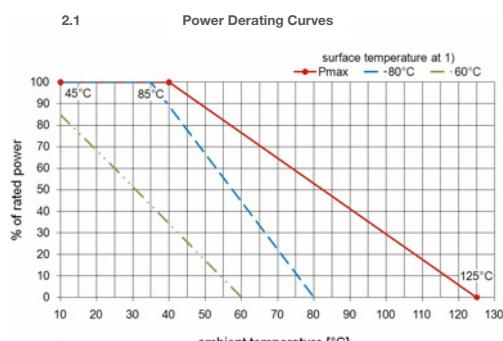

Part Number	BN 392489	BN 392492

Ambient temperature		-40 °C ≤ θ ≤ +45 °C		

Power Derating Curves

625 W – 2500 W Loads without Heat Sink

- Low return loss
- Free of lead and beryllium oxide
- For mounting on cooling system
- Indoor

Part Number	BN 537753C0025	BN 537754C0025	BN 537755C0033
Average power	≤ 625 W	≤ 1.25 kW	≤ 2.5 kW
Connector	7-16 female		1 5/8" EIA
Frequency range	0 - 2.2 GHz		
VSWR	≤ 1.08 @ 0 - 1 GHz ≤ 1.17 @ 1 - 2.20 GHz		≤ 1.06 @ 0 - 0.86 GHz ≤ 1.15 @ 0.86 - 1.5 GHz ≤ 1.25 @ 1.5 - 2.2 GHz
Peak voltage	≤ 1.2 kV	≤ 1.6 kV	≤ 2 kV
Dimensions (L x D x H) mm	150 x 80 x 37	138 x 80 x 37	428 x 148 x 45
Weight	≈ 0.85 kg		≈ 5.5 kg
Operation position	Any		
Heat sink requirement	External cooling system must limit temperature to 110° C at reference point.		

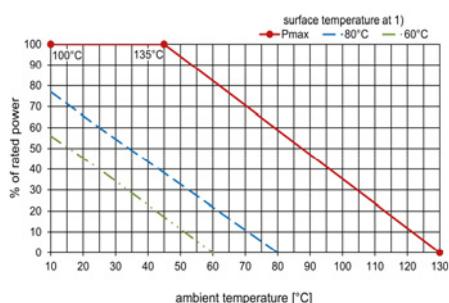

2.5 kW Load

- Low return loss
- Free of lead and beryllium oxide
- Convection cooled
- Indoor

Part Number	BN 537757C1033
Average power	≤ 2.5 kW
Connector	1 5/8" EIA
Frequency range	0 - 2.2 GHz
VSWR	≤ 1.1 @ 0 - 1 GHz ≤ 1.2 @ 1 - 1.6 GHz ≤ 1.35 @ 1.6 - 2.2 GHz
Proof voltage	≤ 3.2 kV
Dimensions (L x D x H) mm	870 x 215 x 350
Weight	≈ 32 kg
Operation position	Cooling fins must be vertically.
Ambient temperature	-40 °C ≤ θ ≤ +45 °C

Power Derating Curves

2.5 kW – 5 kW Load with Fan Cooling

- Coaxial load with intelligent control
- Fan only activated when needed
- Full power allowed from standby
- 4 potential-free interlock contacts
- Low return loss
- Free of lead and beryllium oxide

BN 537756C4033

Part Number	BN 537756C4033	BN 537757C4033
Average power	≤ 2.5 kW	≤ 5 kW
Connector	1 5/8" EIA	
Frequency range	0 - 2.2 GHz	
VSWR	≤ 1.06 @ 0 - 860 MHz ≤ 1.15 @ 0.86 - 1.5 GHz ≤ 1.25 @ 1.5 - 2.2 GHz	≤ 1.1 @ 0 - 1 GHz ≤ 1.2 @ 1 - 1.6 GHz ≤ 1.35 @ 1.6 - 2.2 GHz
Peak voltage	≤ 2 kV	≤ 3.2 kV
Mains	115 - 230 V, 50 - 60 Hz	
Power consumption (full operation)	45 W	90 W
Interlock contact	potential-free, max. 42.4 V AC / 60 V DC, max. 1 A	
No. of interlock contacts	1	4
Noise level	≈ 60 dB (A)	
Operation position	Air input and output must be free to allow air flow.	
Installation	indoors, fins vertically, fastening rail down	indoors, in any position
Dimensions (L x D x H) mm	532 x 218 x 400	764 x 195 x 345
Weight	≈ 32 kg	
Ambient temperature	-15 °C ≤ θ ≤ +45 °C	
Storage temperature	-35 °C ≤ θ ≤ +85 °C	

10 kW – 25 kW Smart Loads with Liquid Cooling

- Coaxial load and cooler with intelligent control
 - Pump and fan only activated when needed
- 10 kW:
absorbed RF power < 80 W: passive cooling
absorbed RF power ≥ 80 W: pump and fan
- 25 kW:
absorbed RF power < 80 W: passive cooling
absorbed RF power 80 - 800 W: pump only
absorbed RF power > 800 W pump and fan

- Full power allowed from standby
- Potential-free interlock with fast self protection
- Low return loss
- 115 V or 230 V single phase mains
- Indoor

Part Number	230 V, 50-60 Hz 115 V, 50-60 Hz	BN 546423C0200 BN 546423C0201	BN 546404C0200 BN 546404C0201		
Average power Pulse Power		10 kW On request	25 kW On request		
Connector	3 1/8" EIA, facing upwards 4 1/2" EIA necessary for P ≥ 23 kW @ 470 to 860 MHz, please order and use adapter BN 715010				
Frequency range	0 - 860 MHz				
VSWR (optimized to selected frequency range)	≤ 1.04 @ DC - 108 MHz or ≤ 1.04 @ 108 - 470 MHz or ≤ 1.04 @ 470 - 860 MHz or ≤ 1.08 @ DC - 860 MHz				
Proof voltage	17 kV				
Mains	115 or 230 V (depending on model) / 50 - 60 Hz				
Power consumption	25 W (standby), 0.8 kW (full operation)	25 W (standby), 1.2 kW (full operation)			
Potential-free interlock contact	Max. 42.4 V AC / 60 V DC max. 1 A				
Noise level	0 dB - 79 dB (according pump and fan operation)				
Operation position	Horizontally – Air input and output must be free to allow air flow.				
Dimensions (L x D x H) mm	775 x 462 x 815		826 x 687 x 1311		
Weight	BN 546423C0200 BN 546423C0201	≈ 85 kg	BN 546404C0200 BN 546404C0201 ≈ 130 kg ≈ 140 kg		
Coolant	SPINNER cooling liquid BN A74423 (30l canister)				
Environmental conditions	For limitations other than above see „Environmental Conditions for Broadcast Products“.				
Ambient temperature	$-10^{\circ}\text{C} \leq \vartheta \leq +45^{\circ}\text{C}$				
Storage temperature	$-20^{\circ}\text{C} \leq \vartheta \leq +70^{\circ}\text{C}$				

25 kW Smart Loads with Separate Cooler

- Coaxial load and cooler with intelligent control
- Pump and fan only activated when needed
absorbed RF power < 80 W: passive cooling
absorbed RF power 80 W – 800 W: pump only
absorbed RF power > 800 W: pump and fan
- Full power allowed from standby
- Potential-free interlock for fast self protection
- Low return loss
- Outdoor cooler to reduce room temperature

Smart load without cooler

Smart load with outdoor cooler,
hoses and cables for 20 m spacing included

Part Number	BN 546418 Smart Load without Cooler	BN 546435C0200 BN 546435C0201 Smart Load with External Cooler
Average power Pulse power	25 kW On request	25 kW On request
Connector	3 1/8" EIA, facing upwards 4 1/2" EIA necessary for P ≥ 23 kW @ 470 to 860 MHz, please order and use adapter BN 715010 .	
Frequency range	0 - 860 MHz	
VSWR (optimized to selected frequency range)	≤1.04 @ DC to 108 MHz or ≤1.04 @ 108 to 470 MHz or ≤1.04 @ 470 to 860 MHz or ≤1.08 @ DC to 860 MHz	
Proof voltage	17 kV	
Mains	5 – 30 V DC, 100 mA for temperature sensor	115 or 230 V (depending on model) / 50 - 60 Hz
Power consumption	–	25 W (standby), 1.5 kW (full operation)
Potential-free interlock contact	–	Max. 42.4 V AC / 60 V DC max. 1 A
Temperature alarm	DC signal via fast responding electronic temperature sensor	–
Noise level		0 dB - 65 dB (according pump and fan operation)
Operation position	Any	Horizontally – Air input and output must be free to allow air flow.
Dimensions (L x D x H) mm	417 x 130 x 130	Indoor unit: 600 x 670 x 1182 Outdoor unit: 1088 x 569 x 753
Weight	≈ 7 kg	≈ 200 kg
Coolant flow rate input temperature interface	≥ 33.5 l/ min ≤ 70 °C Hose connection for 1" inner diameter	–
Coolant (for cooling circuits with aluminum)		SPINNER cooling liquid BN A74423 (30l canister)
Ambient temperature indoor units		-10 °C ≤ θ ≤ +45 °C
Ambient temperat. external cooler		-20 °C ≤ θ ≤ +45 °C (with coolant A74423)
Storage temperature	-25 °C ≤ θ ≤ +70 °C	-20 °C ≤ θ ≤ +70 °C
Environmental conditions	For limitations other than above see „Environmental Conditions for Broadcast Products“.	

50 kW Smart Loads

- Coaxial load and cooler with intelligent control
- Pump and fan only activated when needed
absorbed RF power < 80 W: passive cooling
absorbed RF power 80 W – 800 W: pump only
absorbed RF power > 800 W: pump and fan
- Full power allowed from standby
- Potential-free interlock for fast self protection
- Low return loss
- Integrated cooler or outdoor cooler
to reduce room temperature

Smart load without cooler

Smart load with cooler

Smart load with outdoor cooler,
hoses and cables for 20 m spacing included

Part Number	BN 546438 Smart Load without Cooler	BN 546437C0200 Smart Load with Integrated Cooler	BN 546430C0200 Smart Load with External Cooler
Average power Pulse power		50 kW On request	
Connector	6 1/8" EIA	6 1/8" EIA, facing upwards	
Frequency range		0 ≤ f ≤ 790 MHz	
VSWR (optimized to selected frequency range)		≤1.04 @ DC to 108 MHz or ≤1.04 @ 108 to 470 MHz or ≤1.04 @ 470 to 790 MHz or ≤1.08 @ DC to 790 MHz	
Proof voltage		17 kV	
Mains	5 – 30 V DC, 100 mA for temperature sensor	230 VAC / 50 – 60 Hz	
Power consumption	–	25 W (standby), 3.0 kW (full operation)	
Potential-free interlock contact	–	Max. 42.4 V AC / 60 V DC max. 1 A	
Temperature alarm	DC signal via fast responding electronic temperature sensor	–	
Noise level	–	0 dB - 85 dB (according pump and fan)	0 dB - 65 dB (according pump and fan)
Operation position	Any	Horizontally – Air input and output must be free to allow air flow.	
Dimensions (L x D x H) mm	671 x 207 x 207	964 x 779 x 1348	Indoor unit: 600 x 670 x 1383 Outdoor unit: 1400 x 650 x 1153
Weight	≈ 15 kg	≈ 190 kg	≈ 290 kg
Coolant flow rate input temperature interface	≥ 60 l/ min ≤ 70 °C Hose connection for 1" inner diameter	–	
Coolant (for cooling circuits with aluminum)		SPINNER cooling liquid BN A74423 (30l canister)	
Ambient temperature indoor units		-10 °C ≤ θ ≤ +45 °C	
Ambient temperat. external cooler		-20 °C ≤ θ ≤ +45 °C (with coolant A74423)	
Storage temperature		-20 °C ≤ θ ≤ +70 °C	
Environmental conditions	For limitations other than above see „Environmental Conditions for Broadcast Products“.		

55 kW Smart Loads

- Coaxial load and cooler with intelligent control
- Pump and fan only activated when needed
 - absorbed RF power < 80 W: passive cooling
 - absorbed RF power 80 W – 800 W: pump only
 - absorbed RF power > 800 W: pump and fan
- Full power allowed from standby
- Potential-free interlock for fast self protection
- Low return loss
- Outdoor cooler to reduce room temperature

Indoor load unit

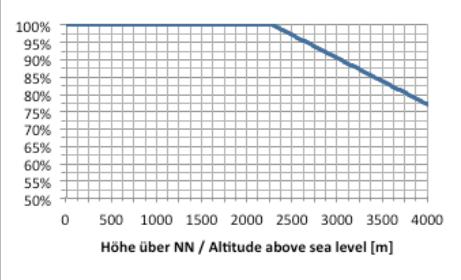

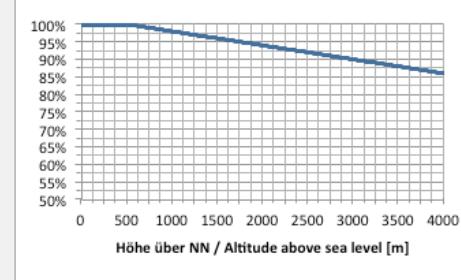

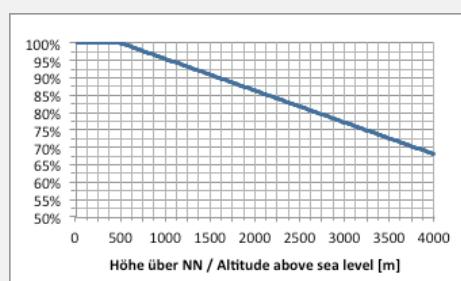

Outdoor heat exchanger

Part Number	BN 546439C0200 Smart Load with External Cooler
Average power	55 kW
Pulse power	On request
Connector	6 1/8" EIA, facing upwards
Frequency range	0 ≤ f ≤ 790 MHz
VSWR (optimized to selected frequency range)	≤1.04 @ DC to 108 MHz or ≤1.04 @ 108 to 470 MHz or ≤1.04 @ 470 to 790 MHz or ≤1.08 @ DC to 790 MHz
Proof voltage	17 kV
Mains	230 VAC / 50 – 60 Hz
Power consumption	50 W (standby), 3.1 kW (full operation)
Potential-free interlock contact	Max. 42.4 V AC / 60 V DC max. 1 A
Temperature alarm	–
Noise level	0 dB - 65 dB (according pump and fan)
Operation position	Horizontally – Air input and output must be free to allow air flow.
Dimensions (L x D x H) mm	Indoor unit: 600 x 670 x 1383 Outdoor unit: 1669 x 650 x 1153
Weight	≈ 300 kg
Coolant (for cooling circuits with aluminum)	SPINNER cooling liquid BN A74423 (30l canister)
Ambient temperature indoor units	-10 °C ≤ θ ≤ +45 °C
Ambient temperat. external cooler	-20 °C ≤ θ ≤ +45 °C (with coolant A74423)
Storage temperature	-20 °C ≤ θ ≤ +70 °C
Environmental conditions	For limitations other than above see „Environmental Conditions for Broadcast Products“.

Environmental Conditions for Broadcast Products (TD-00060)

The environmental conditions for broadcast products are applicable if not stated otherwise at the individual product page.

Products	Combiners, Filters	Patch Panels, Switches, Coaxial Rigid Line Components
Operational conditions		ETSI EN 300 019-1-3 V2.3.2 (2009-1) class 3.1 N
Ambient temperature		-10 °C ≤ θ ≤ +45 °C
Condensation		Not allowed
Relative humidity		≤ 95 %
Derating of input power with increasing altitude	<p>100% 95% 90% 85% 80% 75% 70% 65% 60% 55% 50%</p>  <p>Höhe über NN / Altitude above sea level [m]</p>	<p>100% 95% 90% 85% 80% 75% 70% 65% 60% 55% 50%</p>  <p>Höhe über NN / Altitude above sea level [m]</p>
	<p>The maximum input power can be applied up to 2286 m or 7500 ft above sea level unless noted otherwise in the data sheet. Above this height the maximum input power must be reduced as shown in the diagram.</p>	<p>The maximum input power can be applied up to 500 m or 1600 ft above sea level unless noted otherwise in the data sheet. Above this height the maximum input power must be reduced as shown in the diagram.</p>
Derating of voltage with increasing altitude	Included in the derating of input power	 <p>Höhe über NN / Altitude above sea level [m]</p>
		<p>The maximum voltage can be applied up to 500 m or 1600 ft above sea level unless noted otherwise in the data sheet. Above this height the voltage must be reduced as shown in the diagram.</p>
Transport conditions		ETSI EN 300 019-1-2 V2.1.4 (2003-04) class 2.2
Ambient temperature		-25 °C ≤ θ ≤ +70 °C
Rain, condensation, icing		Not allowed
Storage conditions		ETSI EN 300 019-1-1 V2.1.4 (2003-04) class 1.2
Ambient temperature		-10 °C ≤ θ ≤ +45 °C
Rain, condensation, icing		Not allowed
Safety		EN 60215 (1994) / IEC 215 (1993)

HIGH FREQUENCY PERFORMANCE WORLDWIDE

SPINNER designs and builds cutting-edge radio frequency systems, setting performance and longevity standards for others to follow. The company's track record of innovation dates back to 1946, and many of today's mainstream products are rooted in SPINNER inventions.

Industry leaders continue to count on SPINNER's engineering excellence to drive down their costs of service and ownership with premium-quality, off-the-shelf products and custom solutions. Headquartered in Munich, Germany, the global frontrunner in RF components remains the first choice in simple-yet-smart RF solutions.
